PREFACE.

THE adoption of the Overland Route to India via Egypt, and the opening of the Suez Canal in 1869, have drawn the attention of the civilized world to Egypt to a remarkable degree, and the increased facilities for travel which have been developed in that country during the last twenty-five years have induced thousands of people of all nationalities to visit the land of the Pharaohs. Following in the wake of the ordinary traveller came the philologist and the archæologist, and both have returned and proved that the "wisdom of the Egyptians" was no idle dream, and that the wise men of ancient Egypt actually gave the nations of Europe their letters. But while the philologist has been decyphering the mysteries of the hieroglyphics, the archæologist and excavator have brought to light by means of the spade inscriptions and texts, objects of art, paintings, statues, etc., the existence of which had never been thought of; and native and European alike have vied with each other in filling our national museums and private collections with ancient Egyptian antiquities of beauty and interest. The objects which are exhibited in public museums are, of course, available for inspection and examination, under certain conditions, by every person at reasonable hours; but private collections are often inaccessible, even to those who have a special interest in the subject of Egyptology. With the view of making my collection of Egyptian antiquities, which comprises over 4,000 objects, more useful to those who take an intelligent interest in such things, I have prepared the Catalogue of it which is printed in the following pages, but I warn the reader at

iv PREFACE.

once that it contains neither large stone objects, nor mummies, nor objects the natural place of which is a public museum. The Catalogue is divided into three sections: in the first are described objects connected with the dead; in the second gods and animals sacred to them; and in the third general miscellaneous objects. In an Appendix I have described my recent acquisitions.

My thanks are due to Mr. Towry Whyte and to my daughter Etheldred for several drawings which I have reproduced in the work, and to Dr. Wallis Budge, who has given me counsel and assistance throughout.

MUMMIES AND MUMMY-CASES.

CHAPTER 1.

As the greater part of our knowledge of Egyptian Antiquities is derived from the tombs, I have considered it desirable to commence my Catalogue with such objects as can be said to belong to the Sepulchral Section, beginning with the mummy and all appertaining thereunto, such as Personal Ornaments, Scarabæi, Beads, Pendants, Amulets, Combs, Mirrors, Ushabtiu, Stelæ, etc.

I. Mummy, the foot of a human mummy.

Given by G. H. Birch.

Thebes.

- **1a. Foot,** from the mummy of a female, showing that it has been compressed by wearing a tight pointed shoe; some painted cloth and *cartonnage* adheres to it.
 - L. 7 in. Given by C. Purdon Clarke, C.I.E.
- 2. Human Hand, stout, highly bitumenised, with mummy cloth adhering to the back.

L. S in.

3. Human Hand, probably of a female, with thin tapering fingers; nails well preserved.

L. $6\frac{1}{9}$ in.

4. Hair, coil of human hair, wrapped up in mummy cloth.

Thebes.

5. Wig, possibly for a female, consisting of many plaits of human hair, for the top part of the head, with some additions in front of horse hair as a fringe; the back part is open to pass the long back hair through.

21 limîm.

6. Hypocephalus, or disk of linen, which was prescribed by the 162nd Chapter of the Book of the Dead, entitled "a chapter of causing heat to exist under the head of the Khu," to be placed under the heads of deceased persons. This was practised between the XXVIth and XXXth dynasties, in order to maintain the warmth of the sun in the dead body. The linen is covered with stucco, principally light brown, with hieroglyphic inscriptions written in black, also on green ground; the vignettes are painted upon white. Round the margin is an inscription, "a royal offering to Osiris, lord of the west, great god, lord of the underworld, giving life in Amenti, Teschaki, Osiris, etc., etc."

Dia. 6 in. Thebes.

7. Coffin Lid, the inner lid of a coffin of a Priestess of Amen-Rā. The mask is brightly coloured yellow, with a black head covering and a chaplet on the top; the arms are folded, and the hands are fixed on; it is decorated with a large collar on the breast, a scarab with extended wings below it, then a large figure of Nut kneeling, and figures of Osiris, Rā, Isis, Nephthys, hawks, utchats, &c. It is a handsomely painted lid, some of the figures slightly in relief. There is no name upon it, but the sentence

Dêr el-Baharî.

8. Coffin Lid, the inner one from a coffin of a Priestess of Åmen; the mask wears a long striped head-dress, clenched hands protruding below the breasts, and a deep collar or breast-plate painted to represent bead work, with two cross bands, reaching from the neck to the lower margin. Below is the winged disk with the figure of Rā seated, protected on each side by Maāt with extended wings. Various figures of gods, uræi, and hieroglyphics. Then follow Nut, and scenes of the deceased before Anubis, with an altar of offerings and many more vignettes, rows of uræi and lines of hieroglyphics giving titles, etc., of the deceased, but no name appears.

This is very well painted, many of the figures are in relief by reason of the amount of paint applied.

H. 5 ft. 4 in. Sycamore wood.

Dêr el-Baharî.

9. Panel, in hard wood, being a portion of the side of a coffin, covered with plaster, coloured red and glazed, representing the following in relief,

Amen-Rā, ram-headed, standing in the boat of the Sun beneath a canopy, whilst at his feet is a cynocephalus ape holding the left Utchat in his hands. The goddesses Isis and Maāt are standing in the prow of the boat. There are portions of inscriptions in hieroglyphics.

Kûrnah.

10. Panel, in hard wood; a portion of the side of a coffin, covered with plaster, which is coloured red and glazed, with figures in relief of four male figures holding a rope in the upper division, whilst in the lower division are four ram-headed figures in the same attitude as though in the act of pulling some heavy object, possibly the bier of the deceased. There is a line of hieroglyphics above the figures.

Medinet Gurob.

23. Mask, in wood, from a mummy case; finely finished and painted red.

 6^3_1 in. \times 7 in.

Thebes.

24. Mask, from a mummy case; well executed in hard wood.

H. $5\frac{1}{2}$ in.

Thebes.

25. Mask, in *cartonnage*; for the head and shoulders of a mummy; face gilt; upon the forehead is a gilt disk of the sun and a scarabæus with outspread wings upon its head. Behind each ear is a figure of Isis; in front on the side

lappets is a figure of Osiris seated on a sort of box (?); an ornamental collar shows between the lappets, chequer pattern in red, white, and black, below and on the sides.

H. 18 in. Ptolemaïc.

Medînet Gurob.

26. Mask, in *cartonnage*, from a munimy case, painted red, representing a man of middle age, with a close cut black beard and moustache; he wears a fillet upon his head, beneath which, on his brow, is a band of urei painted yellow. Behind his ears is a head of Rā hawk-headed wearing *atcf* crown; round the back upon a white ground are figures of Anubis on each side, with Thoth, Osiris and Horus between them. This is a remarkable specimen.

H. 15 in. Ptolemaïc period.

Ahmîm.

27. Mask, in cartonnage, from a mummy case. The face is gilded, and is that of a female; she wears a large head-covering. Across the forehead are striped bands of red, yellow, green, and blue to represent a kerchief, in the centre of which is a gilt boss. The side pieces, the breast and the shoulders, are ornamented with coloured representations of deities, such as Rā, Isis, Nebta, Maāt, Apis, the Sphinx, and the Ut'at. On the bottom line are four figures of Maāt on each side facing each other.

H. 18 in.

Obtained by Mr. Flinders Petrie at Hawara.

28. Mask, from an earthenware coffin or mummy case. It is a remarkable face. and has the appearance of being a portrait mask.

30. Mask, in terra-cotta, from a coffin.

H. $7\frac{1}{2}$ in.

Bubastis.

31. Terra-cotta Masks (4) or Gorgoneia; they have been gilded and coloured; they were affixed to wooden coffins as ornaments, and belonged to the early Ptolemaic period. Professor Flinders Petrie found some at Naukratis (see the "Memoir Egypt Exploration Fund," Part II., p. 25).

Dia. 3 in.

Naukratis.

32. Cartonnage; a piece from the breast of a mummy, with a vignette representing

a mummy laid out upon a bier in the form of a lion, with four sepulchral or canopic vases beneath it. Above is the soul in the form of the human headed hawk; on the right side of it is the *khaibit* or shade, and upon the left the sun shedding its rays; upon the right side of the bier is Isis standing in the attitude of adoration, attended

by Ḥāpi, the second genius of Åmenta; on the left side is Nephthys in like attitude, attended by Åmset, the first genius of Åmenta.

- 37. Beard, from a mummy coffin, wood, painted black and yellow.

 L. 8 in. Given by Sir Wollaston Franks, K.C.B.
- 38. Eyes, from a mummy case; two with glass or obsidian pupils set in bronze sockets, the white or tunica albuginea is probably of ivory.
- 39. Eye, in alabaster, with glass or obsidian pupil, from a mummy case.

Tell el-Yahudiyyeh.

40. Eye, from a mummy case, set in a frame of fine blue porcelain.

Tell el-Amarna.

- 41. Eye, from a mummy coffin; blue porcelain, pupil painted black.
- **42. Mummy Cloth**; several pieces, from a mummy unrolled by Professor Sir W. Flower, K.C.B.

- 43. Mummy Cloth, yellow woollen textile, with four rows of deep woollen fringe.

 9 in. × 6 in.

 Thebes.
- **44. Mummy Cloth,** a fragment, having some of the Book of the Dead, and a vignette above, written upon it.

 $7\frac{3}{4}$ in. \times $3\frac{3}{4}$ in. Sakkâra.

45. Textiles, a case containing three fragments of woven tapestry; the central one is a square panel, part of the decoration of a linen robe, worked in brown and red wool upon yellow flax, representing a quail or red legged partridge within a frame. On one side is a small square of fine woven tapestry in red on yellow flax, representing Orpheus surrounded by animals and birds, and on the other is a medallion of a man on horseback; very fine work.

8 in. × 6 in. 3rd to 6th century A.D. See Plate II. Alimim.

46. Fragment of a Garment, with a long strip of embroidery in colours, having upon it the figure of a saint.

2 ft. 6 in × 2 ft. 5 in. Coptic period.

49. Fine Portrait on Linen; a large piece of linen, the covering of a mummy, with the figure of a female of considerable beauty painted upon it, with dark hair and eyes, wearing earrings, draped in mummy cloths of purple colour, with a deep collar upon her breast; her hands project; in one she holds a crook and in the other a flail; below each shoulder is a hawk with outspread wings wearing a disk, holding on to a ring with his feet. Beneath the necklace in the centre is an ibis walking; below the hands, which project from the wrapping, is the disk, whilst under it are nine triangles arranged in threes, one over the other, upon each side of which is the ut'at or eye of the Sun or Moon. In the next division is a bier in the form of a lion with a human face, with a mummy placed upon it, on each side of which is a human-headed hawk or soul, and below it is another representation of the mummy on the bier, attended by Anubis, with Isis and Nephthys at each end.

PART OF THE PAINTED LINEN COVERING OF A GRÆCO-EGYPTIAN MUMMY.

The cloth is divided into three parts with three horizontal lines; the first ending even with the shoulder, the second with the elbows, and the third below the vignette of Anubis and the bier.

On the left hand side of the first is Osiris seated upon a throne; in front of him is an altar; on the right hand only a leg of a seated figure with the altar in front is seen. Above the portrait of the woman, over her head, is a winged scarabæus with outspread wings. Upon each side of the face is the winged uræus resting upon a basket; upon one is the crown of Upper, and on the other the crown of Lower Egypt. At the top of this division are six blank lines arranged vertically for the insertion of names.

In the second division is Rā, wearing the disk, holding in his left hand a sceptre, in the attitude of walking, a tunic round his loins, with two vertical lines in front enclosing a space for his name, which is blank. In the third division is Hathor in the midst of a tree, wearing a blue wig and collar, and long garment; in her right hand she holds a wand or sceptre, and in her left a vase, out of which she is pouring a liquid which is caught in the hands of a soul; on the opposite side is a portion of the figure of Isis in the Persea tree.

This as a portrait is very fine work, and probably the earliest known. (See *Archaologia*, Vol. LIV., pp. 363-368.) 1st century A.D., Græco-Roman. See Plate I.

50. Piece of Linen, of yellow flax, from the wrapping of a mummy; upon the top is a horizontal line of hieroglyphics enclosed within two lines, and upon the left side of the piece is a vertical column of hieroglyphics in continuation, bearing the names and titles of the deceased. The upper part of the left hand side is occupied by the solar bark, in which the youthful Horus is seated upon a lotus flower in the centre of the disk, symbolizing the Rising Sun. Beneath it are Thoth, Sau, Sechet and Maāt, all in the attitude of walking, with their names above them, now illegible, arranged between vertical and horizontal lines, which are coloured red and yellow alternately.

Tehuti, or Thoth, the scribe of the gods, the measurer, ibis-headed, surmounted by the disk of the moon, with a yellow head-dress, flesh green, arms pendent, wearing a red body garment and a tunic, and leopard's skin round his loins.

Sau, wearing the usual head ornament which forms one of the hieroglyphics of his name, is hawk-headed, has a large black head-dress, arms pendent, a collar round his neck, yellow flesh, red garment with leopard's skin round his loins.

Sechet, the fiery dawn, lioness-headed, wearing the disk of the sun, with a uræus in front, a large head-dress, collar round her neck, flesh coloured yellow, arms pendent, wearing a long blue garment, which reaches to her ankles.

Maät, the Goddess of Law and Justice, human-headed, wearing the plume, emblem of her name, upon her head, and a large yellow head covering, necklace round her neck; her flesh is coloured black, arms are pendent, and she wears a long red garment reaching to her ankles. Below is the deceased in the form of a mummy, being supported by Anubis, wearing the jackal's head and yellow head covering, presenting him to Rā, who is in the rôle of Osiris, wrapped as a mummy; he is hawk-headed, wearing the atef crown and large head covering, and there styled the great god, lord of Thebes, holding with both hands the kukufa sceptre; a priest with flesh coloured red, a tight-fitting yellow skull cap, and a tunic round his loins, is pouring a libation from a yellow, perhaps golden vase, over the head of the mummy. Above this vignette are two horizontal lines of hieroglyphics bearing the names of the deceased, the upper space being yellow, and the lower one red. The right hand side of the cloth is occupied with a well executed portrait of Ret-Heru-seshet-f, son of Heru-chuti; he has a close shaven head and face, which is coloured red. Above his head is a flying scarabæus, emblem of the setting sun; round his neck he wears a deep collar, and upon his right shoulder is the figure of a hawk with expanded wings; the remainder of the figure is torn off.

SCARABS.

The insect is usually well formed, with a flat base, and it varies in size from 2 inches to 3 inches; sepulchral scarabs are usually made of green basalt. This description of scarab was an emblem of the god Cheperá, and was laid upon the breast of mummies, or placed inside the mummy in the region of the heart. This class of scarab was inscribed with Chapters XXXv. and LXIV. of the Book of the Dead. The custom of placing these large scarabæi upon the mummy dates from a remote antiquity; very few can be ascribed to an earlier date than the XIIIth dynasty. They mostly date from the XVIIIth to XXIInd dynasties.

Scarabæus, which word is derived from the Greek word $\sigma \kappa \acute{a}\rho a\beta os$, meaning "a beetle," was called by the Egyptians $\chi c\rho cr$ or $\chi c\rho cr \acute{a}$, (

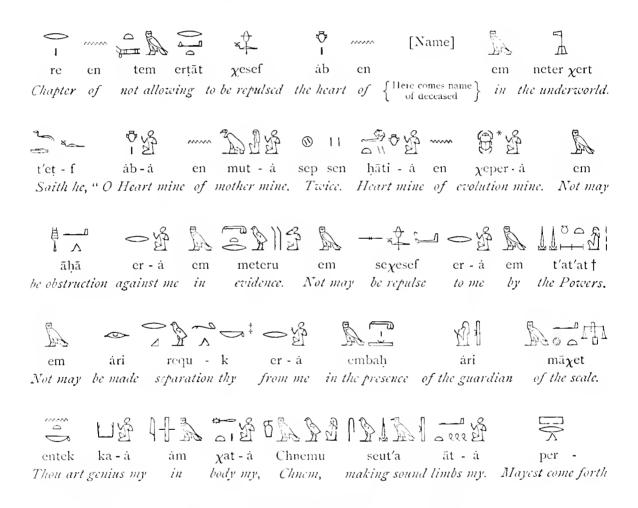

This beetle was probably selected by the priests of Egypt, who were keen observers of nature, as being typical of Rã or the Sun, from its habit of rolling balls of dung, in which they have previously enclosed their eggs; these they push along by their hind legs. In process of time these balls become larger and harder, the beetles then proceed to deposit them in a hole which they have previously made, and the larvæ when hatched feed upon this dung.

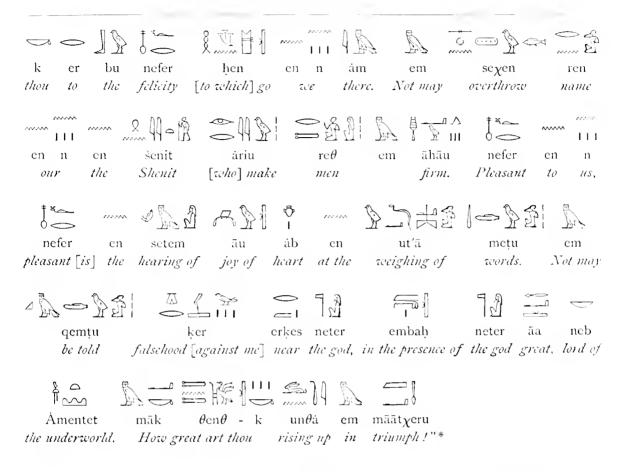

Hundreds of thousands of scarabs, many being well-formed models of the insect, with flat bases, are found in the tombs and ruins of buildings in Egypt, and in other lands where the Egyptians had intercourse; they are perforated through their long axis for convenience of threading. Upon the flat base, the names of gods, kings, individuals, figures, mottoes and designs are engraved in *intaglio*; they were employed as bezels for finger rings, to be strung for necklaces, bracelets, etc., and large quantities were used for funereal purposes; those made of porcelain were fixed on to the outer network of mummies. Ornamental scarabs are usually made of steatite, which they covered with a green, blue, or brown glaze, of granite, basalt, jasper, lapis-lazuli, amethyst, carnelian, glass, bronze, porcelain and composition. The size of the majority of the scarabs is between ½ inch to 1 inch in length.

Large scarabs, made of fine green basalt, containing upon their base a portion of the LXIVth chapter of the Book of the Dead, are usually found in the region of the heart, inside the mummy.

In the reign of Amenhotep III., of the XVIIIth dynasty, very large scarabs were made of steatite, glazed, in commemoration of great events in the life of that king. The Egyptians believed the scarabæus to be an emblem of the god Kheperä, who was styled "Father of the Gods" and creator of all things in heaven and earth, and as such the scarab was used as an emblem of creation and futurity, and being an emblem of Rā, the sun, also typified the resurrection.

The text of Chapter XXXB. reads:—

106. Green basalt Scarab, inscribed with a version of Chapter XXXB. of the Book of the Dead. The upper part of the base, which contained the name of the person with whom it was first buried, has been sawn off; this was probably done when the scarab was usurped by another person. Models of Rings.

Finger Rings of faïence are of very frequent occurrence in the tombs of Upper Egypt, more especially at Tell el-Amarna. These rings, which are well made, with fine glazes of blue, green, red, purple and lilac, with various devices upon the bezels, which are generally of an oval form, were simply models of real rings, and were employed solely for funeral purposes to ornament the fingers of the wooden model

hands which were placed on the coffins of mummies of the XVIIIth and X1Xth dynasties, but are most generally found upon mummies of the XV111th dynasty; a large number from Tell el-Amarna have the cartouches of the kings and queens upon them incuse or in intaglio, and as scarabæi of the family of Khuenaten are comparatively rare, these rings bearing the names of these monarchs take their place and so fill up a gap in the series. The model rings from other parts of Egypt are not so brilliant in colour or so well made. In the British Museum is a mummy of one Katabeh, a priestess of Amen, circa B.C. Soo (No. 6665), which has these wooden hands with rings upon the fingers, but they are of a much later style.

1160. Ear Stud, complete in one piece; both ends are convex; the largest disk is 1 inch in diameter, and the smaller one $\frac{3}{4}$ of an inch.

Red glazed earthenware.

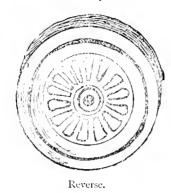

Ear Stud, or ornament for the ear. It consists of a large disk with a flat base, which is ornamented with a rosette, and between the base and the convex top is a groove, presumably for passing a cord round it to enable the object to be suspended from the ear; the top is ornamented with a small rosette in pierced work and a crenellated border round the margin. In the Egyptian gallery of the British Museum is a fresco, from Thebes, representing women singing and clapping their hands to the sound of the double pipe; these all wear the large ear ornament, of the same size and pattern as the present specimens. Hitherto these objects have been classed as "thread winders," but they appear inconvenient for that purpose. Having seen similar objects and of equal size made in gold, silver, and white metal, which are worn over the ears by the women of some of the native tribes of India, known as the "Misranee," or "Misr," who are said to be the descendants of refugees from Egypt, I am inclined to consider these served the same purpose. specimens in the Indian Section of the South Kensington Museum in white metal and gilt from Goojran Walla, 25 inches in diameter; there is also at the same place an oil painting of Navar or Sudra girls of Travancore, 1872, wearing the large circular disks in their ears.

In the Gizeh Museum is a pair of splendid gold ear-rings, the disks have a diameter of 2 inches, which are ornamented with five large disked uraei in appliqué work, and upon the reverse are the nomen and prenomen of Rameses II., of the XIXth dynasty; these are of the same form as those now under consideration. Beneath the disk is a plate of gold with the winged disk upon it, and attached to this

are five uræi with disks upon their heads resting upon a bar, to which seven similar uræi are suspended by fine gold chains.

1431. Pectoral, representing a naos or shrine of a temple, surmounted by seven large uraei, 15 inches high, wearing disks; the breasts of the serpents are divided into six compartments, in each of which are inserted pieces of coloured glass to

represent lapis-lazuli, red jasper, and green felspar. Beneath the cornice, which is also inlaid with coloured glass, is a large square space, bordered on all four sides with inlays of coloured glass to represent precious stones. In the centre of the square is represented in pierced work, King Rameses III., wearing the Atef crown, kneeling upon a footstool in the shape of the sign *nub*, making an offering which he holds in his right hand to Amen-Rā, who is seated upon a throne, holding a sceptre in each hand. Between the figures above is a square which contains the two ovals of Rameses III.

User-māt-Rā-meri-Āmen hind Āmen-Rā is Chonsu, each side of the pectoral of Upper Egypt, resting before; that upon the right plate is ornamented with

Åmen-Rā, Lord of Uast. Standing beand behind the king stands Mut. Upon was a large uræus wearing the crown upon $\frac{\Omega}{1} \bar{a}n\chi$: the uræus is inlaid as side is broken off; the bottom of the lotus flowers, also inlaid with imitation

precious stones. Upon the back of the uræi at the top of the cornice are four loops on each side for suspending it upon the breast. Bronze, with remains of gilding; it has evidently been covered with gold.

Kohl or Stibium (mestchem, an eye paint). A very large number of little vases made for containing this substance have been found in the tombs at various times, and examples of them may be seen in every collection of Egyptian antiquities. They are made in many different forms and materials, such as stone, ivory, wood, bone and pottery. These little vases held powdered antimony or some other substance, which was employed for staining black the eyelids and brows and which was moistened and administered by the aid of a small bodkin or rod with a smooth club-like end, which little implements are likewise frequently found in the vases or separate in the tombs. The application of this koḥl was supposed to give an increased brilliancy and beauty to the eye and may possibly have acted as a stimulant and a preventive of ophthalmia. Painting the eyelids and eyebrows was a very old custom and was practised by the ancient Egyptians from the earliest times, probably by both sexes.

 Thebes.

Ushabtiu, or respondents, were figures in the form of the god Osiris bandaged as a mummy, which were placed in the tombs, where they are found laid upon the floor, or placed in wooden boxes. The deceased was condemned to perform certain labours in the fields of the netherworld, but in order to avoid this, ushabtiu or respondents, representing the working figures of Hades, made of stone, alabaster, faïence, bronze, clay and wood were placed in the tomb to do work for him when they were called. According to the VIth Chapter of the Book of the Dead, they replied, "Here I am ready when ye call." These figures are furnished with the hoe and pickaxe, which they hold in their hands, which emerge from the bandages, together with the cord, which is attached to a basket slung over their backs: thus equipped they were supposed to remove the sand from the East to the West. The VIth Chapter of the Book of the Dead, in some form, is usually inscribed upon the figures, generally bearing the name of the person for whom they were made. During the XXVIth dynasty the inscription was stamped. Some of these figures merely bear the name of the deceased and others are uninscribed. Several hundreds have been found in one tomb. These figures date from about the X1th dynasty to very late times, but are not usually supposed to be of greater antiquity than the XIIIth dynasty; yet I possess a specimen in porphyry bandaged, without any hands showing, which has a short cut beard and an

inscription scratched down the front bearing the XIth dynasty name of Antef. This was probably the period when the use of this form of ushabti first came into vogue. I am of opinion that ushabtiu had been in use from very much earlier times, but that they had a different form. The wooden statuettes of men and women found in the Vth and VIth dynasty tombs, such as women making bread, men carrying objects, figures representing various trades, agriculturists, figures in the boats, and even the two regiments of soldiers of the XIth dynasty, found recently at Siout and now in the Gizeh Museum, were the early representatives of ushabtiu. This view is also taken by Professors Maspero and Erman. ("Life in Ancient Egypt," Adolph Erman, p. 517; "Dawn of Civilisation," by Professor Maspero, p. 193.)

The origin of the custom of placing the ushabtiu in the tombs with the mummies dates from a very early time, and may possibly be a survival of the practice of immolating one of the wives or concubines and a number of slaves or dependents and animals at the burial of a great man; as, for instance, did the Scythians on the death of their king. See Herodotus, Vol. IV, 71, 72. This custom obtained largely amongst ancient nations all over the world, and Professor Maspero believes it obtained in ancient Egypt.

The following is a translation of Chapter VI of the Book of the Dead:—

Chapter whereby the funeral statuettes may be made to do work for a person in the netherworld.

"O statuette there! Should I be called and appointed to do any of the labours that are done in the netherworld by a person according to his abilities, lo! all obstacles have been beaten down for thee; be thou counted for me at every moment, for planting the fields, for watering the soil, for conveying the sands of East and West. Here am I, whithersoever thou callest me."—"Book of the Dead," by Sir P. le Page Renouf, *Proc. Soc. of Biblical Archaelogy*, Part 6. Vol. XIV.

In the front of the box is the sign for heaven, $rac{pct}$, and below it are the two eyes of Horus with the sign $rac{nub}$ beneath each; upon the back is the figure of a large tat, and upon the two other sides are the four genii of Amenti arranged two upon each side.

H. $10\frac{1}{2}$ in., W. $9\frac{1}{4}$ at base $8\frac{3}{4}$ in. at top. Wood, painted in tempera upon white ground. Bought at Gizeh Museum.

1658. Sepulchral box, of rectangular form, for Ushabtiu, put together with wooden pegs, painted white, with a line of hieroglyphics painted black in tempera very coarsely. Upon the top of the cover is a rough representation of the boat of the sun.

Thebes.

1659. Sepulchral box, in the form of a pylon of a temple. On one side is a false

door, over which are three winged disks; the sides are much narrower than the front; on the opposite side to the door are two rows of tats and buckles, with a figure of Osiris, with the body of a large tat, supported by two uraei which have the heads of Isis and Nephthys. The front and back are likewise ornamented with two rows of tats and buckles, beneath which is a mummy lying upon a bier, being guarded by Isis and Nephthys with expanded wings. The box has a lid or cover, upon which is the figure of a mummied hawk.

Ass-as-if.

1662. Two Sepulchral Boxes of sycamore wood. They are shaped much in the form of a pylon, being 18 in. high, 17 in. wide at the base, $14\frac{1}{2}$ in. wide at the top, and 10 in. deep from back to front.

There is a cornice decorated with vertical lines of black, red, black and yellow, several times repeated in that order, painted on a white ground, beneath which, upon three sides of the chest, is a narrow line of five-rayed stars, followed by a row of three figures $\frac{1}{2}$ $\frac{1}{2}$, then Anubis seated upon his hill, five times repeated; then another row of five-rayed stars, beneath which is a row of tats and buckles placed alternately, with a row of five-rayed stars below them.

The principal space on the box is occupied by a figure of the deceased person, represented of a red colour, therefore an Egyptian, wearing a blue cap on his head, a blue collar round his neck, and his tunic is composed of two shades of blue; he likewise wears an armlet on his right arm above the elbow. This figure is represented kneeling upon his left knee, holding up his left arm, with his thumb upraised, and his right hand placed upon his stomach. In front

of him are two blank cartouches, and behind him are three jackal-headed genii, all kneeling in the same attitude; their flesh is represented of a yellow colour, wearing blue cloths upon their heads, with red and blue tunics, with blank spaces in front of them upon the ground, and two cartouches above each of their heads, coloured red, for an inscription. Upon the opposite side of the box the deceased is seen kneeling on his right knee, with three hawk-headed genii kneeling behind him, all with the same attributes as those just described. These genii* or spirits are mentioned in the CX11th Chapter of the Book of the Dead, called "Chapter of knowing the spirits of Pe"—the jackal-headed genius was called Tūaumāutef, and the hawk-headed one, Qebḥsennuf.

Lanzone figures these spirits in his Dizionario di Mitologia Egizia, plate xxvi, and describes them on pp. 56 and 57 of that work, as Ammu \(\bigcip \) \(

Beneath this picture of the "Ammu" are three broad lines of black paint, with a sort of key pattern below them in red and black. This box or stand, which appears never to have been furnished with a lid, is perforated on the lines just below the genii with four rectangular holes which are the same on each side; in one of them is a piece of cord still remaining, but for what these holes could have been intended is difficult now to conjecture.

Having given an account of the front of the boxes, I will now describe the ends. The cornice on the left hand side is decorated with the winged disk supported by two urai, painted on vertical lines of blue and red; beneath the cornice on the end of the box are eight urai painted blue with red disks upon their heads on each side of $\frac{1}{1}$ $an\chi$, which occupies the centre of the line, then a winged disk as before upon a red ground, below it is another row of urai, then a line occupied by the winged disk, also painted on a red ground.

The principal space is occupied by the figure of a hawk, standing upon a pedestal, with an altar in front of it with offerings placed thereon. Over the hawk's head is an uracus and disk. On one side of this pedestal is a figure of Thoth, and on the other a figure of Horus; each god stands with upraised arms and pours a libation over the hawk.

Upon the opposite end the decoration is the same as on the sides, and below is a figure of a hawk with outspread wings, wearing a disk and uræus

^{*} There is a bronze figure of each class of these spirits in the British Museum, Nos. 11497, 11498. See Sepulchral Boxes from Almim, by E. A. Wallis Budge; Proc. Soc. of Bibl. Arch., Vol. VIII., pp. 120–122.

upon his head, holding in each of his claws a sceptre with a plume in it; upon each side of the hawk's head is a blank cartouche.

The decoration of the second box is rather different, and the figures are much larger. In the first line beneath the cornice, on three sides of it, are represented the three characters $\left\{ \begin{array}{c} A \\ A \end{array} \right\}$, then the figure of Anubis couchant upon a bier, with two vases beneath it, four times repeated, then a row of *tets* and buckles. The deceased person here is decidedly a king, with red skin, blue head-dress with uracus in front, wearing a blue collar and armlets, a yellow tunic with black stripes and a blue apron, kneeling on his right knee, with right arm held up with thumb upraised; a cartouche is in front of him. The genii on the one side are hawk-headed, and on the other jackal-headed, and are represented as having yellow flesh; they wear blue head-dresses, a red collar, a light purple tunic with a blue apron; the ends contain the hawk with outspread wings, and with the same attributes as on the other box, and the opposite end has the hawk on the pedestal with the gods Thoth and Horus pouring libations over his head. In the front of this box or stand the holes are circular instead of being rectangular as in the first described box.

Amulets were greatly employed by the ancient Egyptians in all times. They were composed of various materials, and were used as charms, and were thought to possess mystical properties, by the use of which they believed that all evils that might afflict the body or soul could be averted. Amulets made of hard stone were placed round the necks of mummies and also in the interior of the bodies, the use of them being distinctly mentioned in some of the later chapters of the Book of the Dead. For instance, the amulet in the form of the snake or viper was worn to prevent the wearer being bitten through the head by snakes in Hades, and the tet was to permit the wearer to pass through the gates of Hades in silence.

An enormous quantity of small objects made of faïence, representing the gods and other subjects, are found upon and in the mummies, sometimes placed in the folds of the wrappings and upon the outer network. These are all usually furnished with a loop or are pierced for suspension, in order that they may be strung on necklaces or other objects. There is no doubt but that some of these amulets were likewise worn by the living.

1664. Sepulchral Amulets; twenty-five in blue, green and brown glazed fatence plaques, and four in wood, consisting of eight flat plaques of deities, four of hawks, : two buckles, : three figures of Anubis, : one Nephthys, : three !c!s, : two scarabæi, : two utchats, : one lotus flower, . Utchat, or Symbolic Eye, , composed of an eye with the appendage in front called the drop. The utchat is supposed to be the eye of the cow of Hathor and the drop is intended to represent the fluid dropping from the eye of the cow. The two eyes are the eyes of the sun, and are sometimes personified by Shu and Tefnut. At other times the right eye represented the sun and the left eye the moon. These amulets were used as pendants, perhaps singly, to necklaces, bracelets, bezels of rings, etc.; they are found composed of almost every substance; those of hard stone were probably used by the living; but all kinds are found upon the mummy; those of farence were attached to the outer network of mummies. Many of the specimens represent the single right or left eye, others are bifrons, representing both, whilst some specimens occur with two eyes, others with two pair of eyes and sometimes with many. They also are supposed to have typified "good health and happiness."

Stelæ, or sepulchral tablets as they are sometimes called, were in use from the earliest times, and were made of stone; there is a relief in the Ashmolean Museum at Oxford which was made for a priest of the Hnd dynasty, about 4000 B.C. Up to the XIIth dynasty they were rectangular or in the form of doors; placed inside the tombs and inscribed, recording the names and works of the deceased, and containing prayers to Osiris for sepulchral meals for the ka. They were also made to represent pylons of temples. During the XIIth dynasty the stelæ had rounded tops, were carefully executed, and were sometimes painted in colours, usually representing the deceased with his wife seated in a chair in front of an altar, and members of the family bearing various offerings. The stelæ of the XIIIth and XIVth dynasties were of coarser work. During the XVIIIth dynasty the style

and fashion changed, and the deceased is represented as standing in front of the god Osiris, or some other god, or sometimes several gods, beneath whom are the usual lines of dedication to Osiris for sepulchral meals, etc. Up to the XXth dynasty only stone was employed for these stelæ; at this period they were not much used. In the XXVIth dynasty the stelæ were often very much larger, and well executed, both as regards the figures and hieroglyphics. Wooden stelæ were introduced at this period, painted in vivid colours in tempera; many of them are quite beautiful. These wooden tablets continued in use into Ptolemaïc and Roman times, but during the latter period the style was much changed, and they were occasionally made of terra-cotta.

2005. Sepulchral Tablet, with rounded top, representing the deceased Åri-u-n-ḥemita making an oblation to the god Rā-Harmachis, or Horus in the horizon, who is seated upon a throne. The figures are in relief, and the flesh is coloured red. XVIIIth dynasty.

Funeral Cones, or cakes of bread; so called from the fact of their having no better name; they are composed of clay mixed with fine ashes, then steeped in a red liquid and baked, and usually painted white; upon the base, which is circular, is an inscription in relief. It has hitherto been uncertain for what purpose they were employed; they are found only outside the tombs in the vicinity of Thebes; some have considered that they were used to mark the sites of tombs, but they are probably the models of funeral loaves or cakes, which latter appears most reasonable. The problem was first solved by the late Dr. Birch, and he was followed by Professor Maspero and others.

Sepulchral or Canopic Vases; so called from the vase shape of Osiris, called by the classical writers Canopus. They contained the embalmed viscera of the deceased. There were four in number, each with a different head representing the four genii of Åmenti or Hades, the four children of Horus, which were the four cardinal points of the compass, and the deposit of the viscera therein symbolized their dispersion. The first vase was human-headed and called Mesthá or Åmset, which contained the stomach and large intestines; the second vase was Ḥāpi, apeheaded, which held the smaller intestines; the third vase was jackal-headed, and called Tuamāutef, this contained the lungs and heart; the fourth was Qebḥsennuf, hawk-headed, which held the liver and gall bladder. These vases were particularly consigned to the protection of the goddesses Isis, Nephthys, Neith and Selk, and were usually found in the tombs of distinguished persons dating from the Middle Empire until the termination of the XXVIth dynasty; they were composed of various substances, such as alabaster, basalt, limestone, earthenware, etc., and the lids were frequently made of a different material, sometimes of wood.

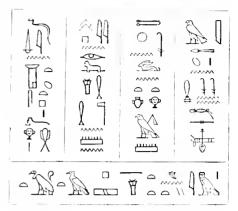

2034. Sepulchral Vase, with a square inscription in four vertical lines of hieroglyphics incised upon it, coloured blue; having the head of Amset. The following is the translation: "Said by Isis, I establish myself over Amset, for the Osiris priest of Anpu prophet of Menthu and Chonsu shining over Har, triumphant, son of Shets-nefer-Tum, triumphant, who is in me."

H. $10\frac{1}{2}$ in. Alabaster. *Bubastis*

[This set was described by the late Dr. Samuel Birch, see *Proc. Soc. Bibl. Arch.*, April, 1883.]

2035. Sepulchral Vase, ape-headed, of the second genius of the Åmenti, Ḥāpi; with an incised inscription of four vertical lines contained in a square, coloured blue. The following is the translation: "Said by Nephthys, I give my protection over Ḥāpi to the Osiris servant of Bast, the prophet of Menthu and Chonsu, resident in the heart of Ḥar-men-har, son of a person of like rank; his mother is Tashep-en-Bast, who is in me."

H. 12 in. Basalt, head of alabaster.

[They are very rare in this material.]

2036. Sepulchral Vase, jackal-headed, of Tuamāutef, the third genius of the Åmenti, with a square inscription coloured blue as before, which reads as follows: "Says Neith, I place (myself) over Tuamāutef for the Osiris prophet of Bast, chief in the place of Ptaḥ, the light of the abode of life, chief of anhu triumphant, son of a like functionary Sheṭs-nefer-Tum, triumphant, who is in me."

H. $11\frac{1}{2}$ in. Alabaster; the head is of limestone. *Bubastis*.

2037. Sepulchral Vase, hawk-headed, of the fourth genius of the Amenti, Qebh-

sennuf, which contained the gall and liver, with the same square incised inscription, coloured blue, upon it. The translation is: "Said by Selk, I cause to be renewed on account of Qebhsennuf, to the Osiris hierodule of Bast, chief of the prophets of the town of Bubastis, Ptah, the light of the great abode of life, chief of Anhu city, Har, triumphant, son of a similar functionary Shets-nefer-Tum, child of Ta-pesh-en-Bast, who is in me."

H. $9\frac{1}{2}$ in. Alabaster.

Bubastis.

2038. Sepulchral Vase, a wooden dummy. Dummies were used at cheaper funerals or at a late date; the viscera were probably separately embalmed and placed in

packets with wax figures of the genii. Painted in colours to represent marble. It might have been a model of a vase for holding drugs or preparations.

2053. Portion of a Monument with two faces in bold relief, one of a man, probably a prince, wearing the side lock, and the other of a woman, possibly a princess, wearing a long wig with an urasus upon her forehead.

5 in. \times 3 $\frac{3}{4}$ in. Red granite.

Bubastis.

2054. Female Figure, standing, wearing a long garment reaching to the ankles, large wig overhanging the shoulders; her face is damaged; has had movable arms, one peg still remains to prove it. Traces of black paint still exist in the wig.

143 in. Wood. Given by Sir A. W. Franks, K.C.B.

2055. Recumbent figure of a nude Female, with large wig, upon a flat slab; it is uncertain for what use such figures were made; the late Dr. Birch was of opinion that similar slabs, having the addition of a naked infant lying beside the female, were placed in the tombs to indicate that the woman had died in childbirth.

2062. Model of a Coffin, in soft calcareous stone, with a figure of Osiris and a small one of Isis on the top in high relief.

H. 6 in.

Benha.

2063. Ptaḥ-Seker-Ausar, standing upon a pedestal, which is ornamented on three sides with baskets with the figures of the ānkh and user sceptre placed on each side of it thus \(\frac{1}{2} \frac{1}{2} \); they are coloured red, green and blue upon a ye low ground; in front of the pedestal are the two eyes of the sun and moon, each placed on the basket, with a nefer in the centre.

Upon the pedestal in front of the figure is a block model of a coffer, with four upright corners painted black, the rest is coloured yellow, upon the sides of which alternate figures of the tet and buckle are placed; upon the top is the figure of a mummied hawk, coloured red, wearing the plumes head-dress. This coffer slides into a groove, beneath which is a niche or receptacle for the deposit of a small papyrus or the mummied heart of the deceased. The figure is standing, as a mummy, wearing the large wig, upon which is the ram's horns head-dress; rising out of it are the two tall plumes, with a gilt disk in front; the face is thickly gilded, the eyes are of obsidian set in ivory and the eyebrows of obsidian also. A deep collar, ending with a hawk's head fastened on each shoulder and of six rows of lotus flowers, drops and other ornaments, reposes upon the breast, beneath

which is Nut, coloured green, with outspread wings, wearing the disk. Below this are two vertical columns of hieroglyphics, black upon a yellow ground. The name of the person for whom it was made is erased.

The ground colour of the figure is red, which is covered over with a network pattern to represent the blue bead covering. Upon the back are two vertical columns of hieroglyphics, painted black on a yellow ground, which are much rubbed.

H. of figure 2 ft. $6\frac{1}{2}$ in. Pedestal, 18 in. \times $3\frac{1}{5}$ in. Wood.

Almîm.

2064. Ptah-Seker-Ausar Figure, the god standing, mummied, having long head-attire and the uræus upon his forehead; has had a beard. Upon his head are the ram's horns, out of which proceed the two ostrich plumes with a disk in the centre; the face has traces of gold leaf; most of the paint is rubbed off the figure; it stands upon a long pedestal, which is painted; in front of the figure upon the pedestal is a model of a small coffer or surcophagus; there has been a hawk at each angle, upon each side of which is the boat of the sun; one hawk has a disk upon its head, the other has lost it, and two of the hawks are missing.

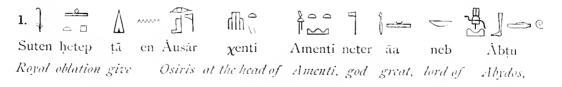

H. 28 in., L. of pedestal 16 in. × 4½ in. Wood.

2065. A Pedestal of a figure of Ptaḥ-Seker-Ausar from Aḥmim. The pedestal is 17in. × 4\frac{3}{4} in. high, and 3\frac{1}{4} in. thick. In front of the socket hole in which the figure was fixed is represented Anubis, couchant, upon a bier, beneath which are six vases, placed in two rows one above the other; four are painted black, and the two central ones red. Upon each side of Anubis are four humanheaded souls, each wearing a red disk, with their hands upraised in the attitude of adoration; behind each of these is the figure of the shade (similar to those described by the late Dr. Birch, Trans. Soc. Bib. Arch., Vol. VIII, p. 386). This vignette is represented on a yellow ground; beneath this are seven vertical lines of hieroglyphics, coloured green, yellow, and orange, the central column being green; below this again are three more columns of hieroglyphics, painted in black on orange, with green stripes on each side, with a kneeling figure of Nephthys on the right hand, and a similar one of 1sis on the left.

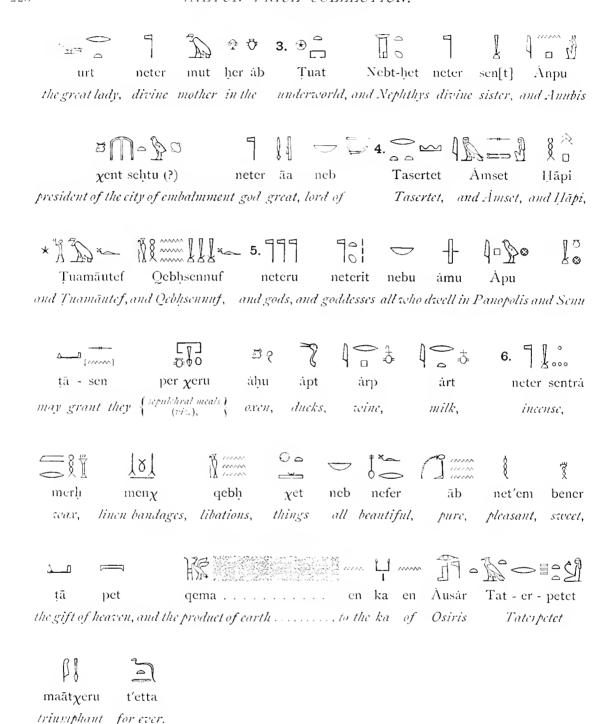

The ornament on the sides and ends is composed of $\frac{0}{1}$ $\bar{a}nkh$, coloured orange, and $\frac{1}{2}$, or kukufa sceptres, painted white, placed back to back, with the space between them coloured red. The ground upon which these decorations are painted is of a deep blue colour; beneath this is a peculiar and effective style of decoration, like the lower end of a circle, filled in with lines and cross-lines, the spaces filled in with red paint.

CHAPTER II.

The gods of ancient Egypt were innumerable, and the mythology was much confused, as besides those more generally known as occurring in the form of figures and statuettes, there were thousands which appear only in papyri, on coffins, etc., which for the greater part have been dealt with by Lanzone in his Dizionario di Mitologia Egizia. There were dynasties of gods before there were dynasties of kings; every nome or province, of which there were forty-two (there being twenty-two in Upper Egypt and twenty in Lower Egypt), had its own cycle of gods, and every city, big town and village in each nome again had its local divinity, all of whom were more or less the forms the great primordial gods of Egypt; and then from time to time the fashion for a certain god changed and other gods took the places of earlier ones, and so on until at last it becomes a difficult task to unravel them. And then we are told by Sir P. Renouf, that every month of the year, every day of the month, every hour of the day and of the night had its presiding divinity, and all these gods had to be propitiated by offerings.*

The gods of Egypt were the attributes of the unalterable powers of nature and of fixed laws, such as day and night, light and darkness, mist and cloud.

The Egyptian religion was monotheistic; the gods of their Pantheon were only manifestations of the one Supreme Being in various capacities. As far as we have as yet ascertained, the principal god of the ancient Egyptians was exemplified by the sun, who was a symbol of the eternal renewal of the divinity, because he dies every night, to be re-born every morning. Thus gods and goddesses represent the different phases of the sun from dawn to darkness or night, sunrise to sunset. These various forms were not the same throughout the whole country, but varied much in different ages as well as in different nomes, and special names were assigned to them. Taking Hathor as an example, Lanzone says there are no less than twenty-four variants known.† In the Temple of Edfu no less than three hundred names are given to this goddess, and in the Temple of Denderah there are also a great number.

^{*} See Hibbert Lectures, 1879, by Sir P. le P. Renouf, p. 85.

[†] See Dizionario di Mitologia Egizia.

Sir P. Renouf* has stated that, "Every one of these gods represents a fixed and unalterable Law. It is in consequence of the unvaried succession of physical phenomena that a god is said to be *ncb maāt*, an expression literally translated by Lord of Law,' but really signifying 'conspicuous by fixed rule.' And it may be held as certain that every explanation of an Egyptian god or goddess which does not satisfy this canon is utterly erroneous."

Sir P. Renouf in the same work, and in his "Mist and Cloud," has identified all the principal gods of the Egyptian Pantheon, and it is mainly to his research and that of Lanzone, Pierret, Budge and others, that I have been able to write the introduction to various gods in this catalogue.

Àmen-Rā, Amon or Ammon. The word Amen signified "hidden" or "mysterious." Amen-Rā was the principal divinity of Thebes, called by the Greeks Zeus, and the Romans Jupiter; he typified the sun in its strength. Ames, Mentu, and Khnemu were forms of this god.

He was king of the gods, lord of lords, lord of heaven, lord of the thrones of the earth, father of the fathers, fertilizer of his own mother, powerful of the powerful; in company with Mut and Chensu he formed the Theban triad. He was self-created.

This god is human-headed, bearded, wearing a crown surmounted with the sun's disk and two tall hawk's feathers, which represented Isis and Nephthys; he wears a tunic round his loins, and is walking, left leg advanced, right arm pendent

and the left bent at the wrist; generally both are pendent. From the back of his head-dress is frequently seen in large figures a rod descending to his feet. Figures occur in silver, with gold head-dress, collar and tunic, with a walking stick; bronze, standing and seated or holding a scimitar.

2157. Åmen-Rā, human-headed, wearing part of the Tesher or red crown of the lower country, surmounted by two tall hawk's feathers, in the centre of which is the sun's disk; he wears a tunic round his loins, is walking, with left foot advanced, with arms pendent.

Amset, see Genii of the Amenti.

Amsu, Amsi, is also called Khem and Min, the ithyphallic god, representing the reproductive principle of nature, and of the Egyptian harvest. In the XVIIth Chapter of the Book of the Dead he is identified with Horus, the avenger of his father, and it states that the two feathers upon his head are the twin sisters Isis and Nephthys.

He probably plays two parts, c.g., that of father and son: as father, he is the husband of his own mother, and as son he is like Horus. He is also a type of Amen-Rā, called Ḥeru-nekht, the powerful Horus.

The chief seat of his worship was Panopolis, the ancient Chemmis and the modern Aḥmîm. He is represented in his figures as standing mummied, wearing the red crown of Lower Egypt, surmounted with the two large feathers with the disk of the sun between them. He wears a beard, his right arm is upraised with a flagellum over it, with his left hand he holds the emblem of reproduction. Figures of this deity occur in bronze, but they are rare in fauence. Specimens made of barley, emblematical of his being the god of the harvest, covered with waxed linen bandages and face of wax, have been found, and some examples are in the collection of the Duke of Northumberland at Alnwick Castle.

2162. Amsu, wearing the Teser crown, the plumes are wanting, in mummied form, holding up his right arm. The flail is broken off; with his left hand he grasps the organ of generation.

An-ḥeru, , son of Rā, and a form of the god Shu. His name in Egyptian signifies "bringer of the heavens." The principal seat of his worship was at This. He is represented walking with left leg advanced, wearing a short wig and a beard. Upon his head he wears two tall plumes with a disk between them; he has a long garment which reaches to his ankles. His right arm is lifted up, in which he holds a cord, the other end of it he holds in his left hand. Lanzone* figures one holding a stick in his left arm which is uplifted, and another holding the ānkh in his left hand and the ānkh, tet and user sceptre in his right hand. Figures occur in bronze and faïence and are rare.

Apesh, a tortoise-headed god, who is supposed to have typified the eclipse, and as such was a deadly enemy of Rā. M. Pierret* considers it to have been an emblem of death and darkness. In the Turin Papyrus, Chapter XXXVI., we find, "Liveth Rā, dieth Tortoise," is written on each of the four gates of heaven. Sir P. le Page Renouf† says it certainly represents a small rounded form which occasionally covers the sun, which led him to identify it with the eclipse. There is a wooden figure of this deity in the British Museum represented with a human body, seated in the Egyptian fashion; it has a long wig, surmounted with the tortoise. Sig. Lanzone‡ figures this god, which he calls Apesh, from the tomb of Rameses V., at Bibân el-Muluk. (No example.)

Anpu, Anubis. Son of Osiris and Nephthys, c.g., the sun and the sunset. He typified the dusk or twilight. He was the god of burials, and as such is always coloured black, wearing the head of a jackal, and is represented standing close to the mummy when laid out on the bier. He is also frequently represented as a jackal sitting upon a pedestal, from which he is sometimes described as Anubis sitting on his hill or mountain. He was also called "opener of the ways," and it is said of him that he swallowed his own father. In another myth he is the son of Rā. His worship was very ancient. He is represented wearing a long head attire, nemmes, surmounted by the head of a jackal, wearing a tunic round his loins, walking with the left leg advanced and arms pendent. Figures of this god occur in all sorts of materials, such as gold, silver, bronze, faïence, lapis-lazuli, wood, etc.; they are commonest in faience.

Anupt, $\int_{\Omega}^{\delta} ds$. This goddess, a form of Hathor, symbolizing probably the dawn or evening twilight, is a feminine form of the god Anpu or Anubis. It has been found at Denderah, where probably at one time it was worshipped. It is very rare. A figure in my collection similar to that figured in Lanzone's Dizionario di Mitologia Egizia, page 74, of wood, represents the goddess standing upon a pedestal with the head of a jackal, wearing a long head-dress and a garment reaching down to her ankles, leaning against a plinth, holding in front a large tet with both hands. also been found in the form of a jackal, holding knives in its hands. specimen is figured in Dizionario di Mitologia Egizia, Plate 31. represents the goddess seated upon a throne, with the head of a jackal, wearing the atef crown and a long head attire, holding in its hands what appears to be, in the Turin specimen, which is of faïence, and which is figured in Lanzone's Dizionario di Mitologia Egizia, Plate 31, a shell, but in the specimen in my collection, which is of wood, it looks more like a bow; upon the back are the wings and tail of a hawk.

Ap-uat, There is very little known of this god beyond what has been written by Sir P. le Page Renouf.* He says the name Ap-uat signifies the "opener of the roads" of the northern and southern skies. This is a title of the sun, who in his daily course from east to west also opens or divides the earth into two, the north and south, and is accordingly called , ip-tau.

Bast, She was the wife of Ptaḥ and mother of Nefer-Atmu. The principal seat of her worship was at Bubastis, where she was probably equivalent to Neith. She typified the dawn, and represented the beneficent heat of the sun as a producer of vegetation. The late Dr. Birch+ stated that she only appeared with the head of a cat at a later period than with that of a lion.

Bes, M. This god was of Arabian origin;* in the Book of the Dead he is identified with Set and is also connected with Isis. He is supposed to have possessed evil attributes, and Sir Gardner Wilkinson; considered he represented "Death" in a bad sense. He probably typified the Sun. The late Dr. Birch; said,

^{*} Ancient Egyptians, Vol. III., p. 148, revised edition by Dr. Birch. † Ibid., Vol. III., p. 148. † Ibid., Vol. III., p. 148.

"Like the Pataikos or Ptaḥ, he has the appearance of deformity, but is an unborn child of Herculean proportions of limbs, covered with the skin of a lion entirely concealing his face, and giving it a Gorgonian appearance." He appears in many characters, i.c., as a warrior with shield and sword, dressed as a Roman soldier, always in terra-cotta; as a dancer; as a musician playing upon the harp, the tambourine and the lyre. He must have been a favourite with the ladies, as we find his hideous face upon many articles of toilet use, and upon pendants, amulets and head-rests, etc. In the figures he is always represented of monstrous proportions, hideous face, with tongue hanging out, wearing a large cornice on his head, with five large plumes stuck into it; he stands naked, with bandy legs and a tail, his hands either rest upon his belly or on his thighs. He is sometimes represented in small faïence figures as squatting. During the Roman period figures of this god were made in terra-cotta of all sizes, and pantheistic figures of the same deity in bronze.

At Turin* there is a figure in calcareous stone of a female Bes. Figures are met with in faïence of all colours, glass, wood, stone, bronze (rare) and terra-cotta.

Chensu, xonsu, O e N, also Chons and Chensu. He was son of Amen-Rā He was called the "hunter," the "persecutor," and the and Mut or Maut. "reckoner of time." He formed the third person in the Theban triad, with his father and mother, Amen-Rā and Mut. He was worshipped at Thebes, and typified the "Moon." He has been called the Harpocrates of Thebes. British Museum is a fine bronze figure of him as Chonspacrat, No. 11,045, of the Ptolemaïc period, rendered like Harpocrates, wearing the large lotus flower He is sometimes seen upon a Cippus, like Horus, standing upon crocodiles, which may be interpreted as the rising sun overcoming darkness. bears out the opinion of Sir P. le Page Renouf that Chensu was once a name of the sun.* He is also represented hawk-headed, and as a youth seated, naked, wearing the disk of the moon between the horns, with the side lock and his index finger to his mouth. Other figures represent him walking, with a hawk's head, wearing the horns and lunar disk, long head-dress, and tunic round his loins. In others he is figured human-headed, with the disk of the moon and horns on his head, the body bandaged, with the kukupha sceptre held in front of him with both hands Figures occur in gold, bronze, faience, lapis-lazuli, etc.

2248. Chensu, seated, with feet on a pedestal, human-headed, wearing a beard, large wig, with uræus on his forehead, on his head the horns and disk of the moon, surmounted by the atef crown, with the head of an ibis in front; he has a short tunic round his loins, and both arms are held out; on his right arm he has had probably a hawk, and there is evidence of his having held some object in his left hand. This may be the figure of a king in the rôle of Chensu.

GENII OF THE AMENTI.

Mestha, Amseth, (), or Emsta, was the first genius of the Amenti, and was one of the four children of Horus, the others being Ḥāpi, Ṭuamāutef, and Qebḥsennuf. They represent the four cardinal points.**

The figure of this deity is usually represented mummied, having a human head.

The stomach and the large intestines were placed in a vase, having the head of Amset as a cover, and were consigned to the protection of that genius. These sepulchral vases have been commonly styled Canopic vases.

Ḥāpi, \(\bigcap \limits \limits \limits \limits \bigcap \limi

The sepulchral vase which had the head of the cynocephalous ape for a cover contained the small intestines.

^{*} See The Book of the Dead, Papyrus of Ani, by Dr. Wallis Budge; Introduction, p. exxiv.

Faumautef, * , the third genius of the Amenti, was one of the four children of Horus, jackal-headed, wearing a long head-dress; the rest of his body was in the form of a mummy; to his care the lungs and heart were dedicated, which were placed in a vase, its cover being in the form of the head of a jackal.

Kebhsennuf or Qebhsenf A Represented with genius of the Amenti, was one of the four children of Horus; he is represented with the head of a hawk, wearing the long head-dress; to his protection were entrusted the liver and gall bladder; the vase containing these remains had the head of a hawk for its cover.

The figures of these genii occur in faïence, glass, coloured or gilded composition, wax, and wood; they are usually flat, and occasionally are perforated for suspension or for fastening to the outer net-work covering of the mummies.

When they are found composed of wax they are met with in the stomach of the mummy, and in those instances no sepulchral vases were deposited in the tombs, but the figures were placed in a packet with the embalmed viscera, and deposited in the mummy.

Each of these four gods was under the protection of a goddess, thus Isis guarded Mestha, Nephthys guarded Ḥāpi, Neith guarded Ṭuamāutef, and Selket Qebḥsennuf.

The deceased's two arms were identified with Ḥāpi and Puamāutef, and his two legs with Amset and Qebḥsennuf.* When he entered into the Sekket-Aaru, the genii accompanied him as guides, and went in with him, two on each side They brought to him from the Lake of Khemta the boat of the Eye of Khnemu.

Ḥāpi, 🎎 🌣 Hap or Apis. A primordial god, engendered by himself; he typified the sun, and was supposed to be a fair image of the soul of Osiris. Hāpi was the second life of Ptaḥ, son of Ptaḥ, of Tmu, of Osiris and of Seker-Osiris.* Memphis was the great seat of his worship. This deity was usually represented as a bull, but under this heading we only refer to the figures with human body and bull's head, having usually the disk of the sun with uræus in front between the horns. Figures occur occasionally in bronze and sometimes in faïence.

Heru-pa-khrat or Harpocrates, Heru-pa-chrat was the son of Osiris

and Isis, and the name signifies the infant Horus; he is the type of the rising sun, is re-born daily and is typical of eternal youth; he is usually represented naked as a small child holding his finger in his mouth, and having a long lock of hair pendent from one side of his head; sometimes he wears the pschent as a head-dress, and sometimes the disk and horns.

Figures of Harpocrates occur in all materials; a considerable number in terra-cotta of the Roman period are found in the Favyûm and in Lower Egypt, principally at Bubastis.

Hathor, Het-Heru, lady of heaven, lady of the sycamore, daughter of Rā and mother of Horus; she is styled the "dwelling of Horus;" as mother of the sun she was figured as a cow. She typified the dawn and evening twilight. Sir P. Renouf says in his Hibbert Lectures* that "she is identified not only with Isis but with

^{*} Hibbert Lectures, 1879, p. 87.

Sekhet at Memphis, Neith at Saïs, Saosis at Heliopolis, Nehemauit at Hermopolis, Bast at Bubastis, Sothis at Elephantine, and many other goddesses." She is also represented on the monuments as a spotted cow, and was supposed to live behind the western mountain of Thebes, from which she is seen to issue forth, wearing upon her head the disk and plumes. Her connection with the west allied her with the setting sun or with Atmu, another form of Rā, of whom she was the wife. She also presided over the passion of love." Her face is usually placed upon the front of the The worship of Hathor dated from the earliest dynasties. Denderah was the principal seat of her worship. She is sometimes represented as a hawk with human head, wearing the disk and horns. She was probably the goddess of beauty, and at a later period was the Egyptian Aphrodite. Her faces on the columns at Abu-simbel and upon the sistra are intended to symbolize considerable beauty. The seven Hathors of whom we read in the Tale of the Two Brothers were probably similar to the Fates of later mythology. Figures of Hathor with a human head are rare, they are usually represented standing, arms pendent, long head-dress, long robe, wearing the disk with plumes and horns and with the uraus on the forehead. See Fig. 11,077 in bronze in the British Museum. Figures with the head of a cow occur in gold, bronze, and faïence. There is a standing figure of this goddess in the British Museum, No. 22,925, with a cow's head.

Heru , Horus. He was the son of Osiris and Isis. He typified the sun in his full strength, and is called the "avenger of his father," as each morning he overcomes Set, the darkness, who has murdered his father Osiris, the sun of yesterday; there is likewise a myth that he smote off the head of his mother Isis.

When the sun god has sunk below the horizon, Horus is said to be sitting alone in his blindness.†

He is usually represented hawk-headed, wearing the long head attire, the pschent, or crown of Upper and Lower Egypt, on his head, walking, left leg advanced, having a tunic round his loins.

Figures of Horus occur generally in bronze, wood, bronze gilded, stone, faïence, and glass; occasionally in gold and silver.

Cippus, or tablet, representing the youthful Horus, or Harpocrates, wearing the side lock, surmounted by a large mask of Bes, which appears above the head of Harpocrates, who stands full face, naked, upon the heads of two crocodiles, holding in one of his hands snakes, a scorpion, and a lion, and in the other a scorpion, snakes, and a gazelle. Upon one side of him is the standard of Rā, with the lotus flower top and the hawk plumed upon it; on the other side is the standard of Nefer-Atmu, surmounted by hawk's plumes.

These cippi are of late date, probably belonging to the period following the XXVIth dynasty; they are usually covered all over front, back, and sides with hieroglyphics or emblems or symbols of different deities, and contain an invocation to the god for power and protection for the person for whom it was made.

They occur in basalt, limestone, calcareous stone, steatite, etc.

These cippi are probably intended to portray the rising sun, who, having overcome the powers of darkness or the night, is trampling upon and otherwise destroying his enemics. They were also used as charms to protect the owner from the evil god Set.

Beneath that is a line containing the following figures—Nephthys, Isis, Serq and Heka, each holding serpents in their hands and an oryx with a hawk upon its back. Then follow seven lines of dedication in hieroglyphics. The lower portion of the cippus below the knees of Horus is broken away.

I-em-hetep , or Imouthis. He was the son of Ptah and Nut; he was identified with Esculapius by the Greeks. He typified the rising sun and was the "Healer" par excellence. The principal seat of his worship was Memphis, where he exercised the same functions as Khons did at Thebes. The triad of Memphis consisted of Ptah, Sekhet and I-em-hetep.

This god is usually represented seated upon a throne, wearing a skull cap, with a collar round his neck, tunic round his loins; upon his knees is an unrolled papyrus, which he holds with both hands.

In the British Museum is a standing figure of this deity, No. 579, in bronze, and another is figured in Lanzone, *Dizionarro di Mitologia Egizia*, Plate 50. Figures occur in bronze, faïence and imitation lapis-lazuli.

2321. I-em-hetep, seated upon a chair, with his feet resting upon a footstool, with a collar round his neck; upon his knees is an open roll of papyrus. Upon the footstool is a dedication in hieroglyphics to I-em-hetep, giver of life, etc. The eyes are inlaid with gold.

Isis, Januard. She was a daughter of Seb and Nut, i.e., the earth and sky. She was wedded to her brother Osiris before they were born; she was the mother of Horus, the sun in his strength. Isis typified both the Dawn and the Sunset, and was one of the goddesses of the West. Single figures of this goddess usually represent her as walking, left foot advanced, draped in a long garment, arms pendent, wearing upon her head

Fig. 2321.

a long head-dress (nemmes), and uracus on the forehead, surmounted by the throne \int , which hieroglyphic forms her name, or by the disk of the sun between the horns, in her celestial $r\hat{o}lc$ as mistress of the heavens.

The figures are made for the most part of bronze, faïence, lapis-lazuli and glass, but occasionally also of gold and silver; like the figures of all the gods, they have one or more loops behind, and in those of faïence a hole or perforation for attachment to a funeral necklace, or, in the case of the larger bronze specimens, for suspension in niches in the temples or houses. Some were probably votive. Occasionally they are found of wood in the tombs. Another very common form of Isis is that representing her as seated upon a throne, wearing the long head attire, surmounted by either the disk and horns, or the throne, wearing a long garment reaching to her ankles, nursing her son Horus, or Harpocrates, the

sun, who is represented naked, wearing a skull cap and a lock of hair on the right side of the head. She holds him in her left hand and offers him her breast with her right hand. As Heru or Horus typifies the sun and Isis the dawn, these figures represent the Dawn suckling or nursing the infant Sun. They are without doubt the prototypes of the Virgin and Child.

These figures are common in bronze and faience, but rarer in wood, lapis-lazuli, crystal, alabaster, and different sorts of stone; occasionally in gold and silver.

There is a fine bronze figure of Hesi-sept, or Isis the dog-star, in the British Museum.

Maāt goddess of Law, daughter of the Sun, lady of heaven, goddess personifying Truth. Sir P. Renouf says Maāt is the most abstract conception in Egyptian mythology, suggested by the invariable regularity of certain physical phenomena. Maāt is a rigidly straight *rule*, and, like our word "right," is used in an ethical as well as in a physical sense.

Figures of this goddess were suspended from the necks of the Egyptian judges by a gold chain. It is stated (by Diodorus, i., 48, and in Wilkinson's *Manners and Customs*, Birch edition, vol. iii., p. 183) that the judge touched the

person gaining his cause with the figure of Truth. She introduced the deceased into the judgment chamber, or the Hall of the Two Truths. Maāt is usually represented seated upon the ground, bandaged as a mummy, with her knees raised up; she wears the long head attire, surmounted by the ostrich feather, emblem of Law, which she, in some cases, also holds upon her knee. In the British Museum are some standing figures in bronze, long head-dress, with ostrich plume, arms pendent, long robe; some with the urasus on the forehead and others without.

Figures appear in lapis-lazuli, felspar, bronze, faience, and blue paste.

Maühes \(\) \(\) \(\) \(\) \(\) \(\) Hos or Arihosnefer; son of R\(\) (the Sun) and Bast (the Dawn), great god, lord of the nome of Uatch and of Denderah. He was probably a form of Horus; he was worshipped in Nubia as Mau-hes, "the glaring lion." He was formerly call Hobs or Hebs. Dr. Birch* says his worship was probably introduced about the period of the Ethiopian dynasty, the XXVth, which invaded Egypt and brought his worship from Dabud and Shendy, of which places he was the local lord.

In his figures he is represented with the head of a lion, wearing the large wig, with the cap of Osiris on his head, walking, left leg advanced, with a tunic round his loins, arms pendent. They occur in bronze and faience.

Menhit \longrightarrow $\{\{1,2\}\}$ was a form of Sekhet worshipped at Esneh, and probably typified the dawn; her worship dates back to early times.

She is represented in her figures standing, with a lion's head, with a disk and uræus upon it, long head-dress, long garment reaching to the ankles, and in one hand the sceptre usually held by goddesses and in the other the crux ansata. In the British Museum is a figure, No. 11017, similar to the above, varying only in head-dress, which is the large plumes, with disk, horns, and urasus.

Several figures of this type in faïence are classed among my figures of Sekhet.

Merit, or Merseker ... This goddess is a form of Hathor, and is styled the "Ruler of the West" or of the Amenti,* "Lady of the Night Heaven, regent of the Double Earth, and Goddess of Hades."

Upon monuments and papyri she is represented in human form, standing, wearing the long head-dress surmounted by the horns and disk, with a collar round her neck, a long robe, the sceptre in her right, and in her left hand the *crux ansata*. Figures of Merseker are usually met with in the form of a serpent with three or more folds, with a human head, wearing the long head attire, and are composed for the most part of faience and calcareous stone.

The principal seat of his worship was at Bubastis in Lower Egypt.

Figures of this god are represented human-headed, bearded, wearing a long head-dress, with the uraus in the front, upon the top of which is the lotus flower, with side straps attached, surmounted by four hawks' plumes placed together; he is in the attitude of walking, left leg advanced, arms pendent. Neith . Net or Neith was the daughter of Amen-Ra and Mut, mistress of women, and lady of heaven,* inventress of spinning and weaving.

Her name signified the Shuttle, which was her emblem, and she is supposed

^{*} Birch: Catalogue of the Collection of Egyptian Antiquities at Alnwick Castle, p. 15.

to have invented the loom. She was the mother of the Sun god Rā and was the great goddess of Saïs. She was the Minerva of the Romans, and the Athene of the Greeks. In the Egyptian Pantheon-she represented the Dawn. On a sepulchral canopus, the goddess herself says: "I come at dawn and at sunset daily:" (Rouge, Étude sur une stèle Égyptienne, p. 125). She was also identified with Isis at Philæ, and Bast at Bubastis, and was also connected with Hathor at Denderah; at Saïs she was worshipped under the form of a cow, which represented the female principle of Cosmos, as the bull typified that of the male.

This goddess is usually represented walking, upon a plinth, left leg advanced, wearing the red crown (tesher) of Lower Egypt upon her head, a collar round her neck, a long garment reaching to her ankles, right arm pendent holding the *crux ansata*, and in the left, bent at the elbow, the flower-headed sceptre. Sometimes both arms are pendent. Figures of this goddess are not common, they occur in bronze, lapis-lazuli and faïence.

She is occasionally represented holding a bow and arrow, and, in the British Museum, there is a figure in faïence, representing this goddess suckling two crocodiles.

in the attitude of walking, left leg advanced, wearing the pschent and a large side lock; right hand is drawn up to the mouth, left arm pendent; there has been another figure standing by its side, but only the plug hole remains.

L. of pedestal 4 in. \times 1 $\frac{7}{8}$ in. and 1 in. high. Bronze. Sais.

On the four sides of the pedestal is a dedication to the goddess Neith in hieroglyphics, which appears to read:—

Nephthys, [1], Nebt Het, was the daughter of Seb and Nut and sister of Osiris and Isis, wedded to Set, the darkness, and she has been supposed to be the mother of Anpu, or the dusk. Sir P. Renouf* states that there are traces of a legend according to which Osiris mistook Nephthys for Isis his wife, the result being that she became the mother of Anpu or Anubis. Nephthys typified the sunset, was sister of the Sun and the Dawn, was married to the darkness, and was mother of the dusk. She is frequently associated with Isis, weeping over the bier bearing the mummied form of Osiris, and sometimes is represented kneeling with her hands in front of her

face, crying. There is a fine wooden figure of her in this *rôle* in the British Museum, of the XVIIIth dynasty. Figures of this class were deposited with mummies in the tomb.

Nephthys was also styled "Eye of the sun, regent of the gods, mistress of heaven and of women." She also is a member of the triad with Isis and Horus; small examples of these are frequently found in faience. She has been identified as Sothis, or the Dog Star.

Figures of this goddess usually represent her as standing or walking, wearing a long head-dress (nemnes); upon her head is a house with a basket upon it. Her name signifies "The lady of the house." She is clad in a long robe reaching to her ankles, has her arms pendent; in most cases she is walking with her left leg advanced. Her figures are common in all materials; in bronze somewhat rare. In the British Museum there is an example in bronze of this goddess standing, holding out her right hand sidewards, which is very unusual.

Osiris, Ausir, was the eldest son of the five children of Seb and Nut, e.g., the earth and sky, he wedded his sister Isis in his mother's womb before they were born. He was also the brother of Nephthys and the father of the elder Horus and Harpocrates. He typified the sun of yesterday, slain by his brother Set, the night or darkness, who in his turn was vanquished by the young Horus. Osiris is always represented in a mummied form, usually upright, but rarely in a scated position, wearing upon his head the atef crown, which is conical in the centre, terminating in a knob at the top; on the forehead is the ureus serpent Mehen, which is generally met with on front of the cap of all gods and kings; upon each side of the crown is an ostrich plume; the crown rests upon a cap furnished with the twisted horns of a ram or goat, suspended to the sides of which are double urei with disks upon their heads, but these only occur in very large figures. He wears a plaited beard and in one hand holds a crook, the emblem of rule, and in the other the flail with three thongs, the symbol of power. The worship of this deity was observed throughout Egypt.

Figures of this god are met with of large size, but usually from the height of 10 inches down to less than an inch; the material in which they are made is usually bronze; occasionally different kinds of stone, bronze gilded, wood gilded, faïence

(rare), seated figures in bronze and farence. Figures occur in bronze with 1sis on the back. The myth of Osiris as related by Plutarch is most interesting and instructive. The names of Osiris are very numerous; the CXL11nd Chapter of the Book of the Dead consists chiefly of the different names of this god.

2413. Osiris, mummied figure standing upon a thick bronze pedestal, with a dedication upon it in hieroglyphics to Ausar Unnefer; he wears the usual crown upon ram's horns, with the uracus upon the forehead, and deep collar round his neck with counterpoise behind; in his right hand (which protrudes from his wrappings above the left) he holds the flail, whilst in his left hand he holds the crook.

Ptaḥ, Dtaḥ, i.c., the "Opener," was a primordial god, creator of the substance of the gods, father of the fathers, father of the gods and of all things, the Artist and Architect of the Universe. He was the principal deity of Memphis, and has been identified as the Egyptian Hephaistos or Vulcan. He typified the morning sun and was one of the oldest deities in the Egyptian Pantheon. He is always represented wearing a skull-cap, bearded, his body bandaged in the form of a mummy, wearing a collar round the neck, with a menat or counterpoise at the back, holding with both hands close to his body a kukupha or dog-headed sceptre.

The triad at Memphis was composed of Ptah, Sekhet and Nefer-Tmu.

Figures of this god occur in bronze, and rarely in faience; they are often found standing upon a small rectangular pedestal; also in stone, wood, and green felspar.

2448. Ptaḥ, standing upon a pedestal, upon which is a dedication in hieroglyphics, Pe-ṭā en Åmen Åpt Ut'at. He wears a skull cap, is bearded and his body bandaged; he wears a gold collar round his neck; his eyes, eyebrows and beard are also gilded. There is a counterpoise to the collar on his back; he holds with both hands close to his body a kukupha sceptre, in his left hand a gilded ānkh. Very fine.

against his breast; sometimes with the figure of Isis or of Sekhet on the back. He was ruler of the necropolis of Memphis. Some small figures of this deity occur with smaller figures of Isis and Nephthys on each side of him, he himself standing upon crocodiles, with the goddess Sekhet at his back; these are of very late date; Bes is occasionally found upon his back. These figures are made of different colours of faience, and have loops or a hole pierced in them for suspension. They are very rare in bronze, but there is a fine example in the British Museum.

Two hawks are sometimes perched upon his shoulders.

As Ptaḥ-Seker-Ausar he probably symbolises the form of Osiris who is about to be transformed into the rising sun.

All figures of this deity are late, probably not older than the XXVIth dynasty.

Rā Rā was the principal deity in the Egyptian Pantheon, the great sun god, and the usual name for the sun. He was the sun of to-day in contradistinction to Osiris who was the sun of yesterday. He was par excellence the sun of noon-day, and the solar orb was said to be his egg. His mother was Neith, the dawn, in her type of the cow. He is supposed to have emanated from Nu the father of the gods; in the Hibbert Lectures, Sir P. Renouf, in a footnote, says, "In the legend of the destruction of mankind, Rā calls before him Shu, Tefnut, Seb, Nut, and the

fathers and mothers who were with him when he was still in Nu." He is frequently represented traversing the heavens in a boat, attended by other solar deities. was constantly at war with Apepi, the serpent, who is always figured as being transfixed with the spears and darts of Rā. Sir P. Renouf* states that "the conflict is not between good and evil, but the purely physical one between light and darkness." He was considered as the manifestation of the supreme deity; his right eye was the sun. In another place, * Sir P. Renouf writes, * When the sun-god has sunk below the horizon, Tmu has been received into his mother's arms, or Set has eaten the head of Osiris or Anubis has swallowed his own father."

Rā was also known under the names of Heru-khuti or Harmachis, Horus of the In the several nomes of Egypt he was worshipped under different names and forms, for instance, he was Amen-Rā at Thebes, Khnem-Rā at Phila, Sebek-Rā at Crocodilopolis. Mentu is likewise a form of Rā, in his warlike Figures of this deity of the most usual types are represented hawkheaded, surmounted by the disk of the sun, wearing the long head-dress, a tunic round his loins, hands pendent, left leg advanced; generally upon a pedestal; in the case of bronze figures, with a loop behind the head for suspension, and in fatence or lapis-lazuli with a hole pierced behind for the same purpose. In the $r\delta lc$ of Rā Heru-khuti is hawk-headed, wearing the long head attire, surmounted by the lotus flower head-dress supported by uræi, resting upon ram's horns, carrying the *kukupha* sceptre in his left hand, and in his right, which is pendent, the $\bar{a}nkh$.

Sati, A goddess associated with Khnum and the second member of the triad of Elephantine, which was composed of Khnum, Sati and Anuket. She was worshipped in Upper Egypt and Nubia, and was styled* the "Eye of Rā, lady of heaven, regent of the two countries."

She was probably a form of Isis, and as such typified the Dawn, and took the same part in the triad of the upper country as Isis did at Thebes. She was the Juno of the Greeks.

She is usually represented seated, wearing the white crown of Upper Egypt, with a cow's horn protruding on each side, collar round her neck, wearing a long

Scb, 3, was father of the gods, son of Shu, and married to the goddess Nut or heaven. He represented the earth and was often called the "Great Cackler" which produced the great mundane egg.

Scb was the Chronos of the Greeks and the Saturn of the Romans.

This god is usually depicted as either standing or walking, wearing a wig, collar, tunic, armlets and bracelets, with a goose standing upon his head, the phonetic value of which is his name.

Schek, the great god, lord of the earth, etc., was usually represented with the head of a crocodile, surmounted by the disk of the sun upon the horns of the ram, wearing a large head covering, tunic round his loins, walking, left leg advanced, right arm pendent, left holding the *kukupha* sceptre, or† wearing the pschent, a tunic round his loins, left leg advanced, right arm pendent, left arm bent at the elbow.

He was worshipped at Ombos as early as the XIIth dynasty, also at Silsilis, Assouan, and in Ptolemaïc times at Arsinoe or Crocodilopolis.

Figures are rare, they only occur in bronze.

[No example. For figure see Pierret, p. 45.]

Sekhet, $\frac{1}{1} + \frac{1}{12} = \frac{1}{2}$, is usually described as beloved of Ptaḥ. She was formerly supposed to represent the raging heat of the sun, but Sir P. Renouf now considers that she typifies the fiery dawn.

In the third Sallier papyrus, page 9, we read, "overthrowing them as Sekhet who sends flames of fire in the face of their foes." And again in *Mist and Cloud* ‡ Sir P. Renouf states, "she sendeth flames of fire in the face of the foes; whoever approaches sinks to ruin, she sendeth fire to burn their limbs."

She was worshipped at Bubastis, the modern Tell-Basta, and was identified with Neith.

Selket, Serq or Serqet A Serk, a daughter of Ra, was a form of Isis, one of the names for the sky, worshipped at Pselcis or Serq. As Safekh Abu she was considered the goddess of libraries. She typified the Dawn, and has been called the eye of the Sun. A dedication of Selket is always written upon the sepulchral or canopic vases bearing the head of Qebhsennuf; she offers protection to the Osiris.

Figures of this goddess are somewhat rare; they are met with in lapis-lazuli usually, in which she is standing wearing a scorpion upon her head; that insect is also her emblem, and her name signifies scorpion. In the Louvre there is a bronze figure of Isis suckling Horus, with the scorpion with a female human head, wearing disk and horns upon her head.

Faïence figures are the rarest; they also occur in lapis-lazuli and bronze.

Set or Sut $\bigcap \bigcap \{\emptyset\}$, son of Seb and Nut; he was wedded to his sister Nephthys (the sunset). He typified "Darkness" and was daily at war with Osiris (his brother) the sun of yesterday, whom he overcame and slew; Osiris was avenged by his son Horus (the rising sun.) The worship of Set was of great antiquity, dating as early as the Vth dynasty. At Ombos he was worshipped under the name of Nubti. was in great favour in the X1Xth dynasty, when two kings are seen to bear his name.

Figures of this god are very scarce, owing in later times to his being looked upon as an evil demon, the murderer of Osiris, and consequently nearly all his monuments and statuettes were destroyed and his name erased from the monuments.

He was represented as a man, with the head of a strange beast, with large square topped ears, and as an animal sitting up with his tail raised vertically. There are two bronze figures of the god in the British Museum. One is bent at the waist as though it had been purposely done with the intention of breaking it in two; it is gilded. All figures of Set are exceedingly rare.

Shu represented the Dawn or Sunlight. Sir P. Renouf in his paper, "Egyptian Mythology, particularly with reference to Mist and Cloud" says, "In later times Shu represented Air, but this is only because the Dawn brings fresh breezes." The Harris magical papyrus identifies Shu with "the Sun travelling at the prime of morning, whilst Tefnut, his sister and wife, seated upon his head, darts her flame against his adversaries." He was also the Egyptian Hercules, as he is always figured resting on one knee holding up the disk of the Sun above his head. "He raises the heaven above the earth for millions of years." In the pyramid texts, Shu and Tefnut play a curious part, Shu being supposed to carry away hunger from the deceased and Tefnut his thirst.* He is represented in the figures as a man wearing the long head-dress and a tunic round his loins, kneeling on the right knee, raising the disk of the Sun above his head with both hands.

The figures of Shu occur in faience, but never in bronze.

Subent, \mathcal{L} and \mathcal{L} and \mathcal{L} also Nekheb or Nishem. She is a local form of the goddess Hathor of Dêrr the metropolis of the third nome of Upper Egypt. Suban has been called the "Eye of Rā" and divine wife of the god Khent Ament,

also amongst others, lady of the necropolis of Hirt, who resides in Buckam. She is represented seated on a chair, in human form, with the vulture head-dress, surmounted by the atef crown, holding in her right hand the kukupha staff, and in her left the $\bar{\alpha}nkh$. There are several different figures in Lanzone's Dizionario di Mitologia Egizia, p. 1018. This goddess is usually known as a flying vulture with the atef crown on her head, with wings outspread and holding a signet in each claw.

supposed to represent the Dawn. Su or Shu and Tefnut were worshipped in Nubia under the form of two lions. The Harris magical papyrus identifies Su with the "Sun travelling upwards at the prime of morning, whilst Tefnut, seated upon his head, darts her flame against his adversaries." Sir P. Renouf* has stated that as Tefnut etymologically represents a form of moisture, he conjectures it must be dew. Figures† of this goddess are rare; she is sometimes depicted sitting upon a throne,

Taurt, A. Thoueris. This goddess was the wife of Set or Typhon; another form of this goddess was Apet. The principal seat of her worship was Thebes. Dr. Birch* says she presided over the pure waters as mistress of them at Elephantine, and in the heaven she personified the constellation known as the Great Bear, whilst in the Neter-khert or Hades she represented the devourer of the wicked or reprobate.

Taurt is generally represented in figures as standing on hind feet, with the head and body of a hippopotamus, with large pendent breasts, hind-quarters of a lion and tail of a crocodile, which extends down the back, arms pendent.

She is also represented standing, with the head and body of a hippopotamus, large breasts, wearing upon the head the large plumes with the disk and horns and holding in front of her legs the twisted tie or knot; she has the hind-quarters of a lion and tail of a crocodile. There is another form of this goddess in the Louvre with the head of a lion, otherwise the same, but that is probably unique.

The figures are common in faience of various shades of colour and are also met with in lapis-lazuli, glass and stone. They are rarely found made of bronze, and in the British Museum is a splendid example in rock crystal.

Teḥuti , Thoth. This god is supposed to have been self-produced, although some say he was the son of Khnum. He was styled the "Measurer," e.g., the "Moon," which he typified. He was the lord of Maāt, inventor and patron of the arts and sciences and literature, scribe of the gods and judge of the dead. In Egyptian he was called Hab, the messenger, as he was also the messenger or envoy of the gods, the Hermes of the Greeks, and the conductor of the souls to Hades. He was lord of Hermopolis, at which city was the principal seat of his worship. He has also been said to be the Logos or Word, (St. John's Gospel, chap. i, verse 1). "In the beginning was the Word, and the Word was with God and the Word was God." Sir P. Renouf* says, "In the battle between night and day, Tehuti, the moon, at fixed intervals, appears upon the scene as mediator or arbitrator between the contending parties." When the great combat took place between Horus and Set, Thoth was present as judge. He gave Isis the cow's head in the place of her own which was cut off by Horus in his rage at her interference.

Teḥuti is always represented ibis-headed, wearing the long head-dress, a tunic round his loins, walking with left foot advanced. Sometimes he wears a head-dress similar to that of Osiris, the upper crown with plumes at each side set upon ram's horns, at others the lunar disk, but generally nothing. When he carries the left eye of Horus it is said to symbolize the full moon.

Figures of this god occur in silver, bronze, faïence, lapis-lazuli, and glass.

Åtmu, or Åtem \mathbb{A} \mathbb{A} \mathbb{A} \mathbb{A} \mathbb{A} \mathbb{A} primordial god, typifying the setting sun, in opposition to \mathbb{A} , the daily sun.

He is called the "Closer," who is daily received into the arms of his mother Nut.

The principal seat of his worship was Heliopolis. Lepsius* has published a text copied from an early coffin which commences with the following: "I am Tmu, who have made heaven and have created all the things which are, and I exist alone, rising out of Nu. I am Rā with his diadem, when he began the kingdom which he made."

This god is represented in human form, bearded, wearing the pschent, a tunic round his loins, in his left hand a sceptre and in his right hand, which is pendent, the $\bar{a}nkh$.

The sacred animals of the ancient Egyptians were worshipped from a very early period in their history, in fact the origin of the worship is unknown; suffice it to say that it is supposed to have been introduced by one of the kings of the second dynasty. The animals and birds and reptiles which were considered sacred were for the most part emblems of certain of the gods and goddesses, and like them symbolized the same abstract ideas. The animals were cared for and attended by priests appointed for the purpose, and lived in the courts of the temples. These temples were richly endowed with lands, etc., and special funds were set apart for the proper maintenance of the animals. Frequently the deities were the heads of the animals who were considered sacred to them.

Bat I set'axemu or side taki. There is no evidence to prove

that the bat was sacred, neither do we know what deity it was an emblem of. Paintings of it occur at Beni Hassan. The only specimen that has come to my notice is one in bronze in my collection, 9 inches in height; it was discovered at Benha; it represents a bat as a conventional figure sitting up upon its haunches like unto a kangaroo, it has a sharp pointed snout, long prick ears, pierced for earrings, and full cheeks, its wings are folded upon its back.

2602. Bat, with sharp pointed nose, large prick ears, pierced for ear-rings, full cheeks, and mammae, and its forelegs or arms are broken off short at the elbow. It is seated after the manner of kangaroos. Its hind legs to the knees are 2\frac{3}{4} inches in length, its tail is brought round on the left side. The head is thrown forward, and it

appears to have wings folded upon its back; below the shoulders is a division, and the whole of the back, including wings, arms and neck, is covered with a reticulated pattern.

Bull Mnevis, Ur-mer or mer-ur. This bull, which was a black one, was sacred to Rā, and was worshipped at Heliopolis. It is difficult to distinguish a specimen of Mnevis from Apis, unless it be in excellent preservation, as Mnevis is usually plain without engraving of figures upon its back. Like Apis it is usually represented as walking, wearing the solar disk and uræus upon its head.

Bull, Apis, sacred to and emblematical of the god Ptali. The principal seat of its worship was at Memphis. It was at Ṣakkara that M. Mariette discovered the necropolis of the sacred bulls, which he called the Serapeum. In it he discovered sixty-four sarcophagi of enormous size in basalt, where the sacred bulls, Apis, were interred from the XVIIIth dynasty to the end of the Ptolemaïc period. Figures of this animal occur chiefly in bronze, representing a bull walking, wearing

the disk of the sun and the uræus between its horns, the vulture with outspread wings is engraved upon its shoulders and its rump, with a housing on the centre of the body. Figures also occur in steatite and faience.

2603. Apis Bull, walking, wearing the disk with uracus between his horns, a collar round his neck, a vulture with outspread wings upon the shoulders and hind

quarters, over his loins a cloth. Inscribed upon the pedestal, "Osiris, giver of life, give life and health to Pe-ṭā-Āusār."

Cat, \(\) \(\) \(\) or \(\) \(\) \(\) mau, mau. This animal was both an emblem of and was sacred to the goddess Bast; the principal seat of its worship was at Bubastis. It was embalmed after death, and large quantities of cat mummies have been found both at Bubastis and Thebes. This animal was held to be more sacred than any other, and several disturbances have occurred from one having been killed. It was worshipped universally throughout Egypt from the period of the XXnd dynasty to Roman times.

The goddess Bast was usually represented with the head of a cat.

An immense number of figures of the cat have been discovered at Bubastis, composed of bronze, silver, wood, stone, crystal, faïence, etc.

Many of the bronze cats that have been found are bigger than life, and have inlaid eyes of stones or coloured glass, etc., and are ornamented with ear-rings and collars round their necks, sometimes with a scarabæus on their heads; they are usually represented in the attitude of sitting up, with the tail brought round on the right side. The large bronze and wooden figures are hollow, and were used as receptacles or cases to contain the mummy or the cremated bones of the cat.

Many of the bronze heads that have been found vary in size from that of a full grown live cat to one of about an inch in height. These were most likely the covers or lids of boxes or cases, perhaps in the form of a cat, probably of wood, which were intended to contain the bones of the animal. A large number of the

smaller figures in bronze and faïence are placed upon pedestals of the form of the hieroglyphic for Bast, \(\f\). It is also found in various positions, such as standing with its back raised, crouching, and also with kittens.

2616. Cat, seated erect, the tail curled round on the right side, wearing a collar with a square pendant in front and a counterpoise behind, glass or crystal eyes, the right ear and part of the right shoulder broken. Plugs beneath for inserting the figure into a pedestal.

Cynocephalous ape, $a\bar{a}a\bar{n}i$, the dog-headed baboon, was an emblem of the lunar gods Khons and Teḥuti. He is usually seated erect, tail curled round to the right side, with his fore-paws resting upon his knees. Many of these cynocephali have disks upon their heads, and what represents the shaggy forepart of the animal is frequently ornamented with lines and conventional figures. Some of these apes are represented as standing, others seated, eating a fruit with both hands, or playing upon the double pipes.

They occur generally in fatence of various colours, lapis-lazuli and calcareous stone.

Hermopolis was the seat of their worship, and they have been found embalmed.

Fish, sacred to Hathor, Isis, Mut and other goddesses.

The principal sacred fish which the ancient Egyptians abstained from eating, in consequence of their having devoured a part of the body of Osiris, were the Oxyrynchus Phagrus, an eel which was sacred at Syene, Silurus Lepidotus, and

Latus, which was an emblem of Hathor, and was worshipped at Latopolis, now Esneh. These fish occasionally occur in bronze and faience.

Hawk, \bigcup Bak. This bird, the sparrow-hawk, was held to be sacred to Horus and to his younger form of Harmachis, likewise to the sun-god Ra. Its worship was general, but the principal seat was Heliopolis. It has frequently been found mummied, and its embalmed remains are also often discovered in small bronze boxes, having the figure of a hawk upon the top.

Figures occur as a simple hawk, with the pschent and the disk and plumes

as a head-dress, in which case he is an emblem of Horus, having dominion over both the upper and lower country; sometimes with the crown of Upper Egypt; when with the disk only, he is an emblem of Rā.

The figures have been found of almost every material and all sizes.

Hedgehog; this animal does not appear to have been sacred. Figures of them occur in earthenware. Lamps of terra-cotta have been found in the tombs in the form of this animal. Small figures composed of steatite or faïence are met with in the form of amulets, representing the animal standing upon a pedestal, the base of which is engraved or incised as on a scarab.

2758. Hedgehog, the ring broken off the top.

Hippopotamus, and was worshipped at Papremis, where embalmed specimens have been discovered.

In some parts of Egypt it was hunted and slain on account of the damage it did to the crops, and for the value of its hide for shields, etc.

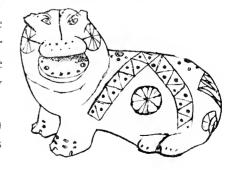

The figure of the hippopotamus is found on the obverse of scarabæi.

Figures are met with of large size in fine blue pottery, ornamented with lotus and other water plants; also small ones are found made of stone, and were used as amulets, etc.

2759. Hippopotamus, representing the animal sitting up, with his head turned

round, mouth wide open, in which have been two large tusks, but these are wanting. The body is ornamented with flowers and water plants, intended to represent the animal in the reeds on the bank of the Nile. This is probably unique in this position.

Horse, & Alphatra; the horse does not appear from the monuments to have been employed in Egypt before the XVIIIth dynasty, it was then highly appreciated, and the horses of Rameses II. were dedicated to the sun. It was not a sacred animal, but Chabas states that "Astarte" in Syria was called the "Regent of horses." He infers that possibly the horse in Egypt might have been an emblem of or dedicated to Hathor. Scarabs are often found with a figure of a horse upon them.

Figures occur in terra-cotta of the Roman period.

Ibis, \(\sumble \) Hab, emblem of Teḥuti or Thoth; the word hab means the messenger. It appears to have been worshipped throughout Egypt, but principally at Hermopolis; it was certain death to anyone caught killing one of these birds. It was an emblem of the moon. They have been found embalmed in immense quantities at Thebes, where they are wrapped in linen bandages; at Ṣaṣkṣara, in conical earthenware vessels with covers, and at Hermopolis in long wooden or stone boxes.

Figures occur in bronze, of large and small size, represented crouching, in wood, in lapis-lazuli, faïence, etc., in many of the small faïence figures the ibis is seated on a pedestal devouring a frog, or resting its beak upon the emblem of truth.

The ichneumon was worshipped especially at Heracleopolis, and was sacred to Buto or Latona.

As it was in the habit of destroying the eggs of crocodiles, it was held in high estimation where those reptiles were abhorred.

They were embalmed, boxes containing their mummies are frequently found with a figure of the animal on the top, also in wood; they occur in bronze of large size, seated upon their hind legs, and small ones in faïence and gold.

Jackal, 日本 J 中 J 中 sáb or sábi, was an emblem of Ánpu or Anubis, the god of burials and opener of the ways. Jackals have been found embalmed at Thebes and Lycopolis, the modern Asyút.

Figures of this animal are found in wood painted black, with a long pendent tail, which were made to be affixed to the top of stelæ; they also occur as the heads of official staves in bronze. They are rare in faience.

Lion, \(\sum_{\text{the lion}} \) \(\sum_{\text{man}} \) \(\sum_{\text{man}} \) the lion was an emblem of the god Heru or Horus, who typified the sun in his strength at noon-day. The principal seat of his worship was at Leontopolis.

Figures of this animal are generally represented as couchant, sometimes in profile, sometimes couchant with the head turned round to the side, and also in the attitude of running. They are made of several materials, but are commonest in fuence. They are found of all sizes, from the gigantic figures in stone down to the very small ones in carnelian.

MISCELLANEOUS OBJECTS.

CHAPTER III.

This chapter contains specimens of the miscellaneous objects which are found in Egypt, which may be styled domestic in contradistinction to the first chapter, which deals with the sepulchral remains, and to the second chapter, which consists of the Pantheon.

2836. Sculptor's or Artist's Model; the head of a female of marvellously fine work, carved upon a block of basalt; one side has been rubbed down, the back is left rough; the sculpture, although in relief, is slightly below the level of the margin, which margin extends upon three sides of it, thus protecting the sculptures from injury when placed one upon another face to face, as they probably were. This specimen is complete in itself, representing the head and neck of a woman (probably a portrait of some queen).

6 in. $\times 4\frac{1}{2}$ in.

Bubastis.

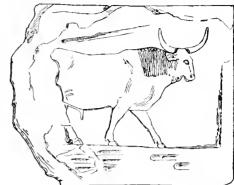

2837. Sculptor's or Artist's Model; this specimen is similar to the foregoing, but is unfinished, the ear has been traced out with a tool but never sculptured, the head-dress and the margins are likewise unfinished.

 $4\frac{1}{2}$ in. \times 4 in. Basalt.

2838. Tablet, with a remarkably well designed figure of a bull in relief, represented

as walking; the left side of the tablet is much decayed. Upon the back are small figures of a bull, as though impressed with a stamp, also the name of Apis in hieroglyphics. This was probably intended as an artist's or sculptor's model.

 $8\frac{1}{2}$ in. \times 7 in. Yellow calcareous stone. Given by the late T. W. U. Robinson, Esq.

2839. Case, for brushes, formed of a piece of reed, containing three rods which have been in all probability the handles of paint brushes; these rods vary from $12\frac{1}{4}$ to $10\frac{1}{2}$ inches in length.

L. $5\frac{1}{2}$ in. Given by the Rev. Canon Greenwell, F.R.S.

2870. Arrow-head, two-bladed, with one barb on the cylindrical body. It is a remarkable fact that this form of arrow-head has frequently been met with in

the Lake dwellings of Switzerland. In the British Museum, Assyrian Department, is an interesting mould, made of bronze, for casting such arrow points, it was found near Mossul. It contains three compartments, and is formed to cast two three-bladed arrow-heads and one single-bladed arrow-head, with a barb on its shaft, of somewhat similar form to that now described.

L. $1\frac{5}{8}$ in. Bronze.

Bubastis.

These small arrow-heads or points are of frequent occurrence in different parts of Egypt, and they vary very much in form. Similar types are also found throughout Asia Minor, Syria, and Greece, and it is difficult to say to what nation they really belonged; possibly the types known to us were used by all the nations of the East at the time. Sir Wollaston Franks states that this Egyptian form of arrow-head has been found as far east as China. Some people believe they are not of greater antiquity than about 300 B.C. In 1817 many tons of the Egyptian type of arrow-head were discovered near Mount Caucasus. (See Archaelogia Æliana, Vol. I., p. 201.)

It is most likely that the Egyptian specimens are of Asiatic origin, probably Scythian.

[See Proc. Soc. Antig., Lond., 2nd Series Vol XV., p. 298.]

In the chapel of Thothmes I. at Dêr el-Baḥarî, there is a beautiful wall sculpture in colours, representing that king and Senseneb making offerings to the god Anubis. Amongst the various offerings is a stand of five libation vases; upon a shelf beneath it is an incense holder (without the sitting figure of the king), the arm of which is rather curved. I never saw one placed in this way anywhere else.

Draughts. The game of draughts is of great antiquity, and, from all we know, was in considerable favour with the ancient Egyptians. The game appears to have been played in very much the same manner as at the present day; the pieces were arranged in lines at either end of a chequered board; specimens of these boards may be seen in the British Museum and other large collections. The boards had nine squares one way and seventeen the other, in all 153 squares. They were alternately coloured red and black. The game was one of the diversions of the Karneter, the Egyptian Hades, according to the XVIIth Chapter of the Book of the Dead. At Medinet Habu, Rameses is represented seated in a chair playing the game with a lady of his harem. The draughtsmen were called *ab*, which literally means, leap, jump, hop, or play. They are of various shapes and of all materials; some, the ordinary types, were like small nine-pins, whilst others were mushroom shaped, human or animal headed, etc.

Dolls were in general use as playthings with the children of the ancient Egyptians, and a great number of various forms have been discovered from time to time in the tombs. Some very much resembled the ordinary well known wooden Dutch doll, with movable arms and legs; they are always of the female sex and many are very realistic.

Ball; the game with the ball is of extreme antiquity, as we learn from the Egyptian monuments, and there were many ways of playing with them (see Gardner Wilkinson's *The Ancient Egyptians*, Vol. 11.). Many balls have been found made of leather cut into eight strips and sewn together, stuffed with bran or coarse grass, and are similar in all respects to balls of the present day.

2995. Ball, made of faïence, painted with blue and black stripes to represent the leather covered balls. It is uncertain whether these faïence balls were actually used for some game or whether they were merely models placed in the tombs of children.

Measures, a set of four beautiful measures in greenish-blue faïence. Three of them are formed like cups with handles, whereas the fourth is of a somewhat oblong shape with rounded base and straight handle, rather in the form of a situlus. These are all fine and rare, of exact workmanship, the rims are perfectly flat and even, and when filled with millet seed the strike can be used with the same amount of accuracy as it can when applied to metal measures of the present day.

Mr. H. J. Chaney, Chief of the Standards Office, Board of Trade, took a great deal of trouble in testing the capacity of these measures, which he reduced to cubic

3245. Chinese Bottle, similar in form to those used for snuff; such bottles are not of greater antiquity than the 13th century A.D.; they must have been imported into Egypt by the early Arab traders. They have never been found in tombs, but have been discovered in the ruins of old towns, and are of late date, having come to Egypt with caravans. Upon one side are two bats, in Chinese "Fuh," which reads as extreme happiness or twice blest.

POTTERY.

Pottery in Egypt dates from a very remote period, in fact as early as anything we know of. Antiquaries usually look to pottery as evidence of age and the development of art in a country. In Egypt perfect specimens are met with

dating from the earliest dynasties to the close of the Roman occupation. Many hieroglyphics are of the form of vases of different shapes. We see from the walls of early tombs of the IVth, Vth, and VIth dynasties the uses the vases were put to, i.e., to hold wine, water, milk and other liquids; the bowls and pateræ were no doubt employed for meats and fruits. A vast quantity are met with in the tombs to contain the food for the ka. Many of them bear the names and titles of the persons to whom they belonged in life, or for whom they were made to be placed in their tombs.

In addition to the vases, there were great quantities of figures made in terracotta during the Greek and Roman periods. The most plentiful figures appear to be of Harpocrates and Bes.

The lamps that are found in Egypt are of very late date, *i.c.*, of Greek, Roman and Christian periods. They are very numerous and are mostly composed of coarse earthenware, some of terra-cotta, and comparatively few of bronze. Those in earthenware are imperfectly baked, with a spout for a single wick and a hole in the centre as a receptacle to contain the oil. Most of the nozzles are blackened with use. Some of the lamps are circular, others are shoe-shaped, and some, which are probably Greek, have tall handles in the form of a leaf. Others are decorated with figures in relief of various objects and many are stamped beneath with the potters' marks, they are of the Roman period. The toad lamps, so called from their having a figure of a toad in relief upon them and generally with a palm branch or the Greek letter A impressed upon the base, are of late Roman and even Christian times, made at Alexandria. The earliest of these depict a clear and well defined toad, which in course of time, the original idea of the toad being lost, exhibit only the disjointed limbs of the reptile, sometimes the hindquarters, and last of all it was degraded into palm branches and knobs. (See Plate, illustrating the degradation.)

Old Egyptian lamps are rare and were in the form of bowls upon a foot or a stem.

3548. Mould, for casting figures of the Bennu bird, whose presence at Heliopolis symbolized the return of Osiris to the light of day. This bird was employed to represent the Phænix of the Græco-Egyptian fable, of which Wilkinson gives a full account. The form of the bird is like that of a plover. It has been supposed by some that the reappearance of the bird after the lapse of hundreds of years was the cause of its being adopted to represent comets.*

bilge water out of the holds of ships, and was also used in the Delta of Egypt for purposes of irrigation. It has been mentioned by Diodorus Siculus, Strabo, and Vitruvius; quotations from them I give below. For the probable manner of using these appliances see illustration by Mr. Towry Whyte.

L. 10 in., dia. 4¹/₄ in. Probably late Ptolemaïc period. From Lower Egypt.

Diodorus Siculus, I., 34. 2 [of Egypt and the Nile] "and the natives easily irrigate it by means of a certain machine which Archimedes of Syracuse invented and which is from its shape called cochlea (snail)."

Ibid., V. 37 [of Mining in Spain] "and most remarkable of all, they draw off the streams of water with the so-called Egyptian cochleæ, which Archimedes the Syracusan invented during his sojourn in Egypt. (A series of these pumps

is arranged until the mouth of the mine is reached.) And since this machine is of most ingenious construction, with only moderate labour an immense volume of water is wonderfully thrown up, and the whole water of the river is easily brought from the depth and passed out in daylight."

Strabo, XVII., p. 807. "From this fortress to the Nile extends a ridge, along which the water is conveyed by a series of wheels and pumps from the river, worked by 150 captives."

Ibid., HL, p. 147. (Immense zeal of the Turadtani in mining, who) "often drain the rivers they come across with Egyptian pumps."

Vitruvius, X., 11, devotes a whole chapter to the pump.

3931. Lance-head; a splendid example of flint working, flat and thin, beautifully

chipped. It is pointed at one end and forked at the other. The edges of the pointed end are plain for the first $2\frac{1}{2}$ inches up from the point, the rest of it is very finely serrated. It is of similar type to those found by Prof. Flinders Petrie at Nagada, belonging to his New Race.

L. 5 in. Yellow chert. Old Empire. Bought at Luxor.

Petrie says "the lower end is always less finished than the fork, and was evidently intended for hafting, while the fork is elaborately worked to a saw-edge or a knife-edge. In one case the lance had a long cord wound around it, with two alabaster knobs at the outer end and the whole wrapped in hide. From this we gather that these lances were used for throwing

we gather that these lances were used for throwing at short distances, and were checked by a cord from flying too far if they missed the quarry." See "Nagada," by Prof. Flinders Petrie, pages 50, 51, Plate LXXIII, 66.
